

Abstract

DID JOHN LAWSON SLEEP HERE?

AN INVESTIGATION OF LOTS FIVE AND SIX IN HISTORIC BATH, NORTH CAROLINA

by Nancy Jo Mullens

September 2010

Director: Charles R. Ewen, PhD

Department of Anthropology

The investigation of Lots Five and Six in Bath, North Carolina, began during the spring semester of 2003 and continued intermittently until the summer of 2010 under the direction of Dr. Charles R. Ewen. During this time, 26 shovel-test pits and 25 units were excavated revealing three separate occupations. The latest occupation dated from the late eighteenth century to the twentieth century, the middle occupation dated from the middle of the eighteenth century to the early nineteenth century, and the earliest occupation dated to the early eighteenth century. The early eighteenth century occupation was concentrated in the northern portion of the yard near the ballast stone chimney foundations, corresponding to the ownerships of John Lawson and his daughter Isabella.

Dedication

This thesis is dedicated to Mom, my family, and others who pushed me to achieve my potential.

Acknowledgements

First and foremost, I would like to express my gratitude to Dr. Charles R. Ewen for his time, diligence, and persistent motivation. I would also like to thank the members of my committee, Dr. E. Thomson Shields, Dr. E. Anthony Boudreaux III, and Dr. Robert L. Bunger, for their timely efforts and wise advice. I want to thank Ms. Delores Hall and Ms. Joy Shattuck at the Office of State Archaeology for helping me to find reports and saving me several trips to Raleigh. I would also like to thank Dr. Billy Oliver for helping me to sort through the mountain of information concerning Bath. I would also like to thank Mr. Maury York, Dr. Jonathan Dembo, and other members of the Joyner Library Special Collections Department for helping me to find invaluable information and understand it. I would like to show appreciation to the members of Digital Collections, especially Mr. Joseph Barricella and Chris Cossiah, for aiding me in digitizing my maps. I would also like to thank Ms. Jennifer Leggett and the ladies at the Beaufort County Register of Deeds for their assistance in locating and understanding very old and very illegible deeds. I would like to express my thanks to Ms. Eva C. (Bea) Latham and the staff of Historic Bath for their invaluable assistance with my research. Last and most importantly I want to thank my family and friends for their support, unwavering faith in my abilities, and persistent motivation.

Chapter 1: Introduction

Setting the Scene

When people hear of the archaeological work being done in Bath, North Carolina, their first thought seems to be that the archaeologists are looking for pirate gold, because Bath's most notorious resident was Edward Teach, otherwise known as Captain Blackbeard (Lefler and Newsome 1973:68-69). However, Bath has a very long and significant history as the oldest town in the state of North Carolina and has been the home of many prominent residents. Bath was once the home of John Lawson, Joel Martin, and Simon Anderson, the founders of Bath. Also residing in Bath were Thomas Cary, the leader of Cary's Rebellion; Robert and William Palmer, owners of the Palmer-Marsh House; and Governor Charles Eden (Watson et al. 2005). Governor Eden is credited with diminishing the presence of pirates in coastal North Carolina by ratifying the Act of Grace and granting a pardon to Blackbeard. However, it is also alleged that Eden was dabbling in a little piracy himself with Captain Blackbeard and Tobias Knight, the port collector of the time. During Blackbeard's time in Bath, he would "salvage" a ship and its cargo from the coastal waters and allegedly share these "salvaged" goods with Eden and Knight (Lefler and Newsome 1973:68-69). However, within a matter of months after his pardon, Blackbeard was killed by Lieutenant Robert Maynard of the Royal Navy at the request of North Carolinians (Powell 1989: 83).

Bath is not only the oldest town in the state of North Carolina, but it was also a place of refuge for Europeans during the Tuscarora War of 1711 (Watson et al 2005:19). The first casualty of this war was John Lawson, a founder and surveyor of Bath and its original town lots. He purchased Lots Five and Six for himself in 1706 and later repurchased the same lots for his daughter Isabella (Watson et al. 2005:9-13; Beaufort County Register of Deeds [BCRD])

1708/9:1.112-113). John Lawson may have called Bath his home, but he rarely hung his hat there, as he was an explorer at heart who did not remain in any one place for very long. He and his friend Baron Christoph von Graffenreid would often travel the interior of coastal Carolina. However, in September of 1711, while trying to discern the navigability of the Neuse River, the two men and their companions were captured by 60 natives and taken to Catechana. After a council meeting and an altercation between Lawson and the Coree chief, Graffenreid was released but Lawson was tortured to death (Lefler and Powell 1973:68-69).

The property once owned by Lawson that ended up in the hands of Lawson's daughter, Isabella, Lots Five and Six, have been the focus of several archaeological investigations. These lots are possibly the most beautiful in Bath and perhaps saw a great deal of eighteenth century commercial activity. These lots were at the junction of Bath and Back Creeks and were the closest lots to the Official Port of Entry for North Carolina starting in 1715.

Statement of the Problem

The subjects of this investigation are Lots Five and Six in the State Historic site of Historic Bath, North Carolina, and the Lawson ownerships of these lots. Documentary evidence is very clear that the lots in question were once owned by John Lawson and Isabella Lawson. It is also quite clear that John Lawson did in fact stay in Bath on many occasions to conduct court business. He even states that he lived on his lots in Bath in his will of 1708 (Grimes 1912). Documentary evidence suggests that there were improvements on the property during the ownership of Isabella. The Act of Assembly of 1715 stated that the lots needed to be resurveyed and improved with at least a habitable house for an owner to retain ownership. Isabella repurchased the lots and retained ownership until 1729, indicating that the lots were improved, with at least a habitable house, during the Isabella Lawson ownership (BCRD 1715:1.246-247).

The archaeological interest concerns the ballast stone features in the northern yard of historic Lot Five. The feature in the northwestern portion of the yard is visible on the surface, and the ballast stone feature in the north-central yard was uncovered during 2003 excavations. These features are popularly believed to be the remnants of John Lawson's house on Lots Five and Six. However, no evidence has been found to corroborate this belief. Therefore, the purpose of this thesis is to reexamine the historical and archaeological evidence to determine if the ballast stone features are in fact associated with the John or Isabella Lawson ownership of Lots Five and Six.

Hypothesis

The ballast stone features on historic Lots Five and Six are associated with a structure that was once occupied by John Lawson and/or his daughter Isabella.

Null Hypothesis

The ballast stone features on historic Lots Five and Six are associated with a later occupation, separate from either Lawson occupation.

Road Map for the Thesis

This thesis will expound upon the aforementioned problem using the documentary and archaeological evidence to answer the question of whether or not were the ballast stone features on historic Lots Five and Six are associated with a structure that was once occupied by John Lawson and/or his daughter, Isabella. Chapter Two will discuss the historical background of Bath, John Lawson, and historic Lots Five and Six. Chapter Three will discuss the archaeological background, including previous archaeology in Bath and on Lots Five and Six and the methodology for excavation and interpretation. Chapter Four will discuss the results of excavation and analysis including the 2003 Historical Archaeology Class Survey, the 2003 East

Carolina University Field School excavations, the 2004 Summer Ventures excavations, the 2005 East Carolina University Field School survey, the 2010 Summer Ventures excavations, and the 2010 Summer Ventures survey. Chapter Five contains interpretations and conclusions, future research, and a summary. There are three appendices attached to this thesis: the first is the field specimen catalog, the second is the provenience guide, and the third is the artifact catalog.

Chapter 2: Historical Background

Bath

Bath is located in what is currently Beaufort County, North Carolina, and is 1.25 miles north of the Pamlico Sound at the juncture of Bath and Back Creeks. The site is also the possible location of Secotan and the Pamouik Nation town of Pamtecough or Pamticoe. During the sixteenth century the entire region was a wilderness (Watson et al. 2005:2-12).

In 1684 Lord Proprietor Seth Sothel, patented a property that included a 12,000 acre plot containing the future site of Bath with a four square mile area land grant (Watson et al. 2005:5). This grant began at the mouth of North Creek and extended along the Pamlico River's north bank to Duck Creek. From Duck Creek it extended north to Harvey Creek and then east to Rowland Creek near the mouth of Bath Creek and then south to North Creek (Figure 1) (Reed 1962:20-21).

By 1696 the population of the peninsula on which Bath Town sits was such that Bath County, named for John Granville, the Earl of Bath, was formed in the area (Lefler and Powell 1973:56). Sothel later lost his claim to the land, and ownership was passed to David Perkins. Perkins in turn sold 60 acres of the land to Simon Anderson, Joel Martin, and John Lawson between September 27 and the end of October 1706 (Watson et al. 2005:9). The Surveyor General of the Province, John Lawson, set out the boundaries of Bath Town in 1704 on the Pamlico River and the North Carolina General Assembly incorporated Bath Town on March 8, 1705/6 ¹(Powell 1989:70).

¹ The abnormality of this date is a result of the Calendar Act of 1750 enacted by British Parliament to stabilize the calendar system with a change from the Julian calendar to the Gregorian calendar (Great Britain and Pickering 1762). This change of

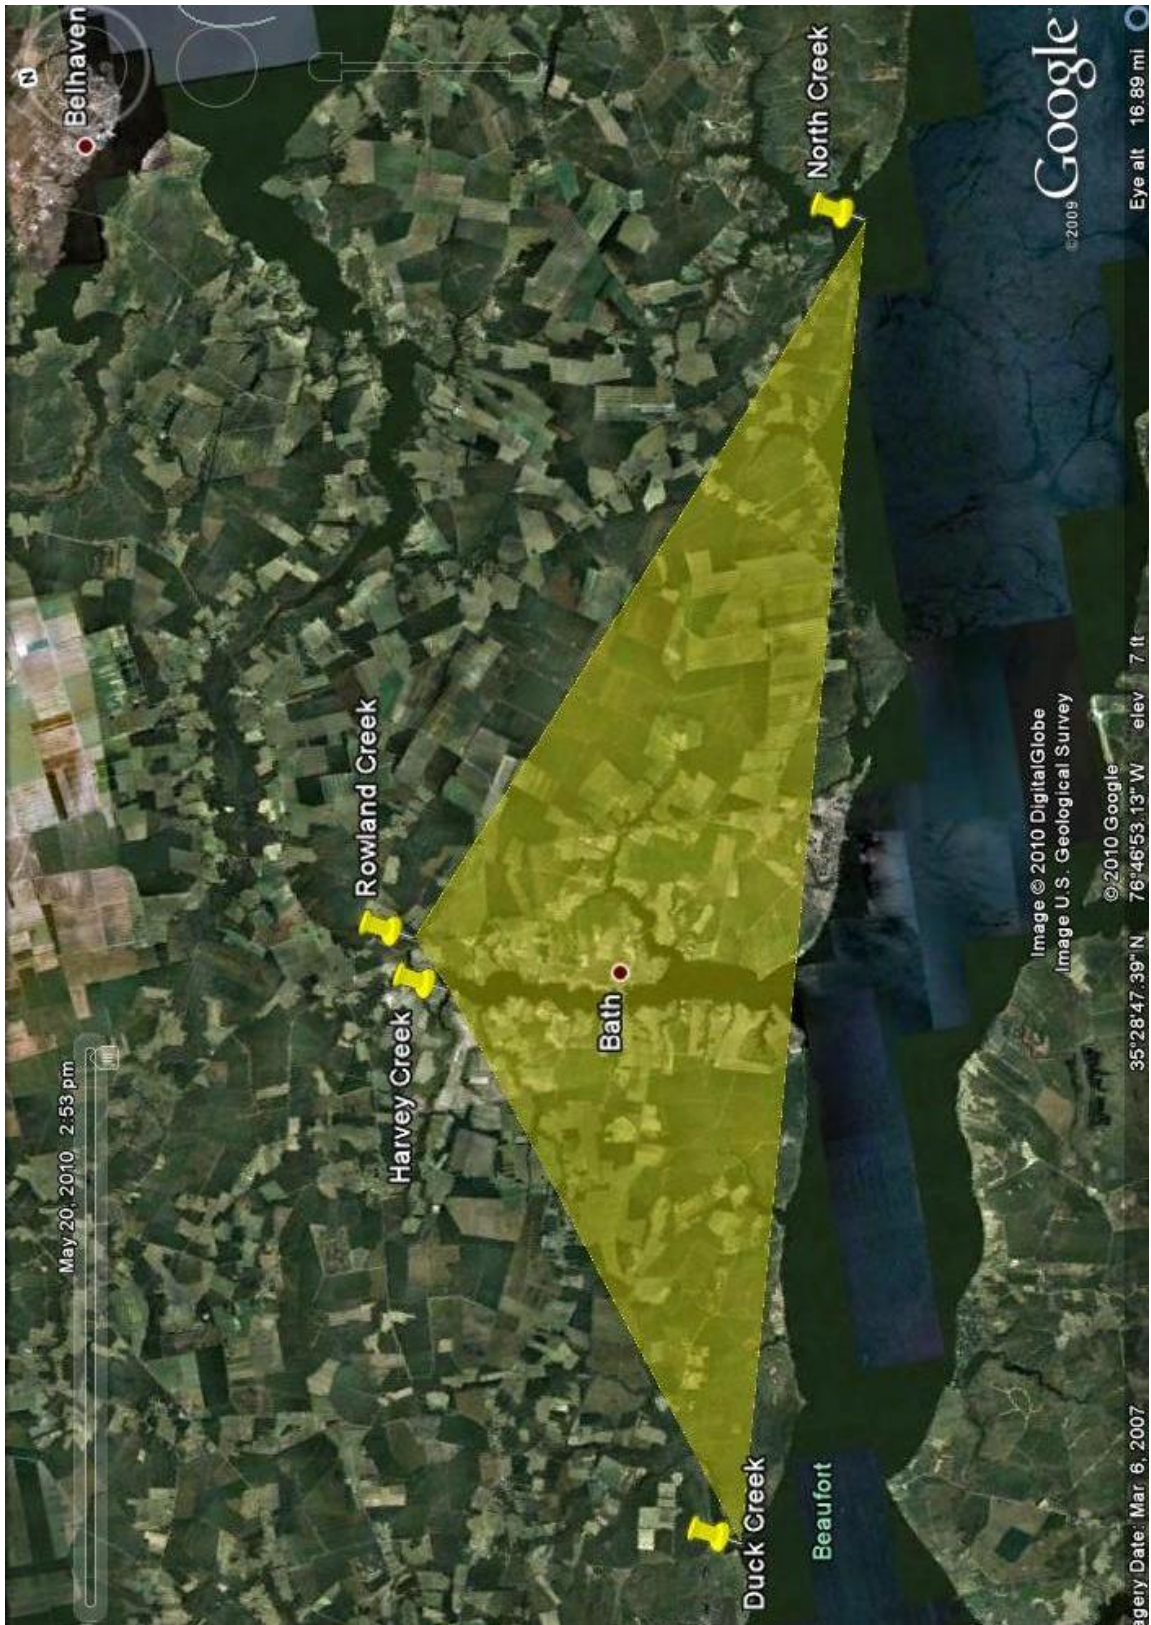

FIGURE 3: Seth Sothel Land Patent (Retrieved from Google Earth May 20, 2010).

When Bath was formed, land was set aside for a church, a town common, a wood lot, and various other public buildings (Lefler and Powell 1973:57). There was also a fence around Bath with a main gate and a smaller gate (Reed 1962:83). By 1706/7 there were at least 12 occupied houses (Lefler and Powell 1973:57). Early inhabitants of Bath included two lawyers, a blacksmith, a silversmith, a doctor, and two shipwrights (Reed 1962:46). During the Tuscarora War, Bath became a haven for those affected by the war (Watson et al 2005:19).

Possibly Bath's most well-known resident was the notorious pirate Blackbeard. According to local lore, Blackbeard allegedly purchased Plum Point and took a wife in Bath. Teach's wedding was supposedly presided over by Governor Charles Eden. Teach, Eden, and Tobias Knight, port collector, allegedly shared Teach's "salvaged" goods. These "salvaged" goods were found on English and French vessels, one of which Blackbeard returned to Bath, and he claimed salvage rights which were granted by Governor Eden. Tobias Knight was further alleged to have even stored some of Blackbeard's ill-gotten goods in his barn (Lefler and Newsome 1973:68-69). Teach was killed in 1718 in the Ocracoke Inlet by Lieutenant Robert Maynard of the British Royal Navy (Powell 1989: 83).

In 1715, Bath was designated the province's first official port of entry and was assigned a customs collector that was appointed by the British commissioners of customs. This success was short-lived, and after 1730 the port of Bath only serviced the Pamlico Region (Lefler and Newsome 1973:108). The port was destroyed by multiple hurricanes throughout the years, with the hurricane of 1769 being the most devastating, thus ending the relative prosperity of Bath as a port town (Reed 1962:56).

John Lawson

Little is known about the young life of John Lawson, but it is known that Lawson left England for the New World in 1700 to survey and map the interior of Carolina Colony for the Lords Proprietors (Watson et al. 2005:10). He began his voyage on a boat in the Thames. The ship first went to Cowes to the south of England to pick up passengers, but soon sprung a leak and landed in the Isles of Scilly for repairs. They left the Isles of Scilly on May 1, 1700 and landed in New York in late July of the same year. Two weeks later the ship left New York and landed in Charles Town, South Carolina, in August of 1700 (Lawson 1714: xxiii-xxiv).

In late December of 1700 Lawson began his explorations of North and South Carolina (Lawson 1714:1). Two months into the expedition the band arrived at the plantation of Richard Smith of Bath County, possibly where Lawson met his common law wife, Hannah Smith (Lefler 1967: xiv-xv). It took Lawson 55 days to trek approximately 550 miles, exploring the areas of North and South Carolina and creating his map of Carolina (Figure 2) (Watson et al. 2005:9).

Lawson had many careers, including Deputy Surveyor and later Surveyor General of North Carolina, planter, fur trader, Clerk of Court, Proprietor of Bath, and public registrar for Pamtecough County. He was a key proponent for the incorporation of the town of Bath in March of 1705/6 and was named a town commissioner. Lawson bought two of the first 13 lots sold in Bath between September 27 and the end of October in 1706. These lots were on the corner of Water and Bay Streets (currently Main and Front Streets) and were later the site of the historic Bonner House (Watson et al. 2005:9-13). Included in the purchase of these two lots were the waterfront lots across Main Street as evidenced by the wharves and landings on the land he leased to Hannah Smith. By the end of 1706 Lawson had built “house edifices, buildings, storehouses, orchards, and gardens” (BCRD 1706:1.91–92). In 1708 Lawson made a will and

left the lots and house that he lived in to Hannah Smith, who was pregnant with his child. He divided the rest of his holdings between Hannah, their unborn child, and his daughter, Isabella (Watson et al. 2005:13).

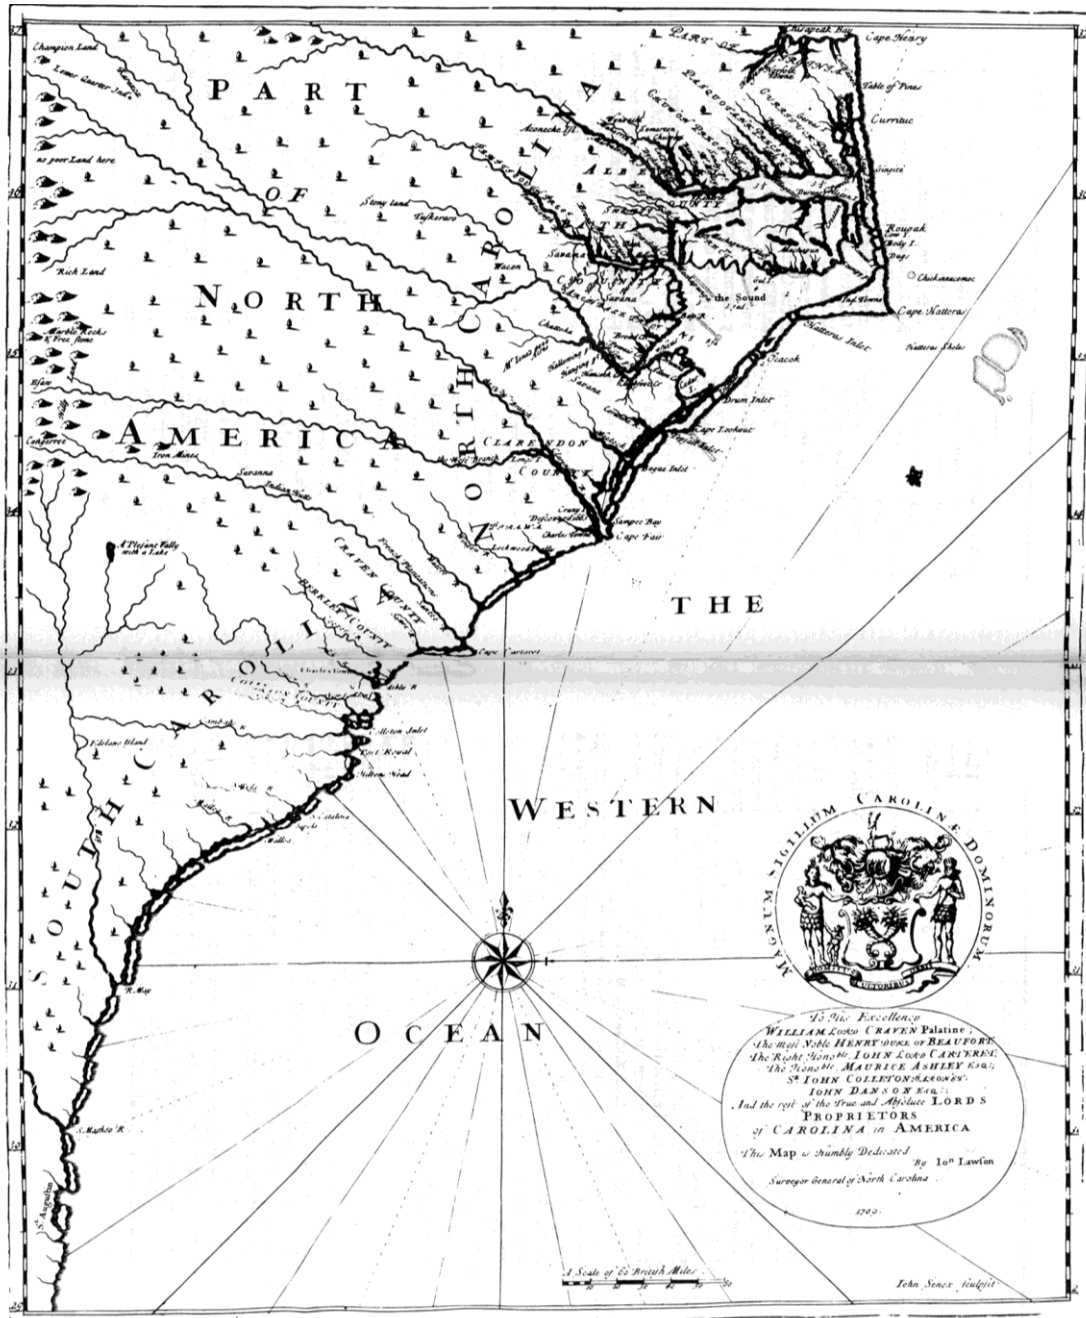

FIGURE 4: John Lawson's Map Published in his 1709 A New Voyage to Carolina (Lawson 2004).

In 1709 Lawson sailed to England to publish *A New Voyage to Carolina*, which included a journal of the initial time he spent in Carolina. During this time, John Lawson met Baron Christoph von Graffenried. John Lawson so admired the land near the Neuse River that he convinced Graffenried to sponsor a colony there under the Swiss Company (Lefler and Powell 1973:59). In April 1709, Lawson was appointed Surveyor General of Carolina by the Lords Proprietors and commissioned to lay out the town of New Bern for Graffenreid and Louis Michel (Lefler and Newsome 1973:56). In January of 1710, Lawson and Christopher Gale led a group of 650 Palatines, some unwilling, to North Carolina (Lefler and Powell 1973:61). The journey was so harsh on the travelers that approximately half of the colonists never saw North Carolina (Lefler and Newsome 1973:57). The disasters included spotted fever and being set upon by privateers, but the worst part was that Lawson and Gale had not made the proper provisions for the settlement. Graffenried later complained about Lawson not making the proper provisions and having to pay the proprietors, the natives, and Lawson for the land (Lefler and Powell 1973:60-61). Lawson did, however, survey the town for Graffenreid, and this colony became New Bern in 1710 (Watson et al. 2005:10).

In September of 1711, Lawson, Graffenreid, and others set out to see how far the Neuse was navigable, to see how far they were from the mountains, and to try find a more expedient route to Virginia. The trip was to last fourteen days, but a couple of days into the trip they were captured by 60 natives and taken to the Tuscarora King, Hancock, in Catechana. After a meeting of the council it was decided that Lawson and Graffenreid should be set free. However, before they could leave, the Coree arrived, and Lawson got into an altercation with the chief of the Coree tribe. Both Lawson and Graffenreid were condemned to death. Before the sentence could be carried out another council met and decided to let Graffenreid go, but Lawson was executed.

Lawson was tortured and then killed either by hanging or by being burned to death on September 10, 1711. He was the first casualty of the Tuscarora War (Lefler and Powell 1973:68-69).

Lawson spent a total of eight years in North Carolina prior to the posthumous publication of *Lawson's History of North Carolina* in 1714, which was a republication of *A New Voyage to Carolina* (Lawson 1714:xi). During these eight years, there are nine deeds registered in Bath County, now Beaufort County, which state that John Lawson lived in Bath Town (Norris 2003 Deeds:125-126, 196-197, 199, 202, 218, 227-228). When Lawson leased land to Hannah Smith, he refers to the land as “all his site and Lots of Land whereon he now liveth being within a fence and containing one acre and eight Pole lying on the front street in Bath Town and all houses edifices, buildings, storehouses, orchards, gardens, front land, wharves, landings, easements and commodities” (BCRD 1706:1.91-92). There is also evidence that he was in Bath several times to perform his duties and conduct transactions in court. He was in Bath to gift a cow to Francis Brice on July 4, 1705 (BCRD 1705:1.44) and to gift cattle to Isabella, his daughter, on April 22, 1707 (BCRD 1707:1.68). He was also in Bath to testify as Clerk of Court on July 5, 1705; July 10, 1706; January 7, 1706/7; March 18, 1706/7; May 3, 1707; July 1-2, 1707; July 6, 1707; July 10, 1707; July 16, 1707; October 7-9, 1707; and January 7, 1707/8 (Norris 2003 Deeds: 111, 149-150, 152, 158, 160-165, 168-173, 175-181, 183, 188-191, 193). He was in Bath to purchase land on June 10, 1706; October 1-2, 1706; January 8, 1706/7; and October 23, 1707 (Norris 2003 Deeds: 125-126, 156, 159, 187, 198). He was in Bath to sell Bath Town lots on September 27, 1706; October 1-2, 1706; October 5, 1706; July 1, 1707; August 2, 1708; and January 2, 1709/10 (Norris 2003 Deeds: 129-144, 146-148, 160, 177, 200, 309). He is evidenced as being in Bath because he witnessed Court transactions on October 1, 1706; August 7, 1707; October 13, 1707; February 26, 1707/8; and July 12, 1708 (Norris 2003 Deeds: 127, 153, 172, 192, 206, 253). He

was in Bath to act as Public Registrar on January 8, 1706/7; July 6, 1707; and July 16, 1707 (Norris 2003 Deeds: 154-155, 163, 165). He was in Bath on January 21, 1707/8 to act as a Vera Copia Clerk and on March 25, 1708 to sell land to Mrs. Sarah Dupuis (Norris 2003 Deeds: 221, 227). He was also in Bath on April 2, 1708 to witness Isabella buying lots in Bath and on July 21, 1708 to gift land to Isabella (Norris 2003 Deeds: 197, 231). John Lawson was also in Bath on August 12, 1708 to appoint Joel Martin Sr. and Mrs. Hannah Smith as his attorneys (Norris 2003 Deed: 202). Mr. Lawson is documented as being in Bath on 35 different days (Figure 3). This suggests that he did call Bath his home and did sleep in Bath at least from time to time.

History of Lots Five and Six

Lots Five and Six were originally sold to John Lawson as a unit and remained together until William Palmer sold Lot Five to the merchants Hill & Barrow in 1786 and sold Lot Six in 1788 (Figure 4) (Watson et al. 2005:13; BCRD 1786:6.33–34). The lots were reunited when Joseph Bonner purchased Lot Five from William C. G. Carrington and Lot Six from John Mixon in August of 1830 (BCRD 1830:16.342, 345–346).

Lots Five and Six began as residential property, first with John Lawson and again with his daughter Isabella. Lots Five and Six were residential during the time of John Lawson, because when he leased land to Hannah Smith he refers to the land as “all his site and Lots of Land whereon he now liveth being within a fence and containing one acre and eight Pole lying on the front street in Bath Town and all houses edifices, buildings, storehouses, orchards, gardens, front land, wharves, landings, easements and commodities” (BCRD 1706:1.91-92). They were still residential during the ownership of Isabella Lawson as evidenced by the January 17, 1715 Act of Assembly stipulating that lot owners were to place a “habitable house” on lots in order to retain ownership, and as Isabella sold the lots in 1729 she must have complied with the

act or she would have lost the property and could not have sold it (BCRD 1715:1.246-247; BCRD 1729:2.22-23).

The early eighteenth century port was the heart of the town and probably made Lots Five and Six, which are right at the junction of Bath and Back Creeks, a highly valuable speculative property after the establishment of the Official Port of Entry for North Carolina in 1715. After 1715, a line of ownership of merchants and an innkeeper sets the lots up as commercial property, commercial property being defined as property used to make a profit. The store house and mansion house discussed in the transactions between Howcott and Calef also support this idea, because the storehouse was a merchant's store and the mansion house could have been used as an inn (BCRD 1740:2.345-346; BCRD 1748:3.2-3; BCRD 1748:3.102).

Due to the economic fluctuations of the past 300 years, it was difficult to compare relative values of sale and purchase prices of the properties. Therefore, when discussing the relative value, the profits, or the losses of the sales of the properties, the prices, where applicable, were translated into 2008 United States dollars (Tables 1, 2, 3, and 4).

Lots Five and Six

John Lawson

John Lawson purchased Lots Five and Six in the fall of 1706 and soon after willed them to Hannah Smith for the duration of her natural life. It is popularly believed that after his death at the hands of the Tuscarora in 1711, Lots Five and Six passed to Hannah Smith (Watson et al. 2005:13). However, there is evidence that suggests that he sold one or both of the lots to M. Levi Truewhite prior to this date and repurchased them in his daughter's name in 1708/9.

John Lawson Timeline

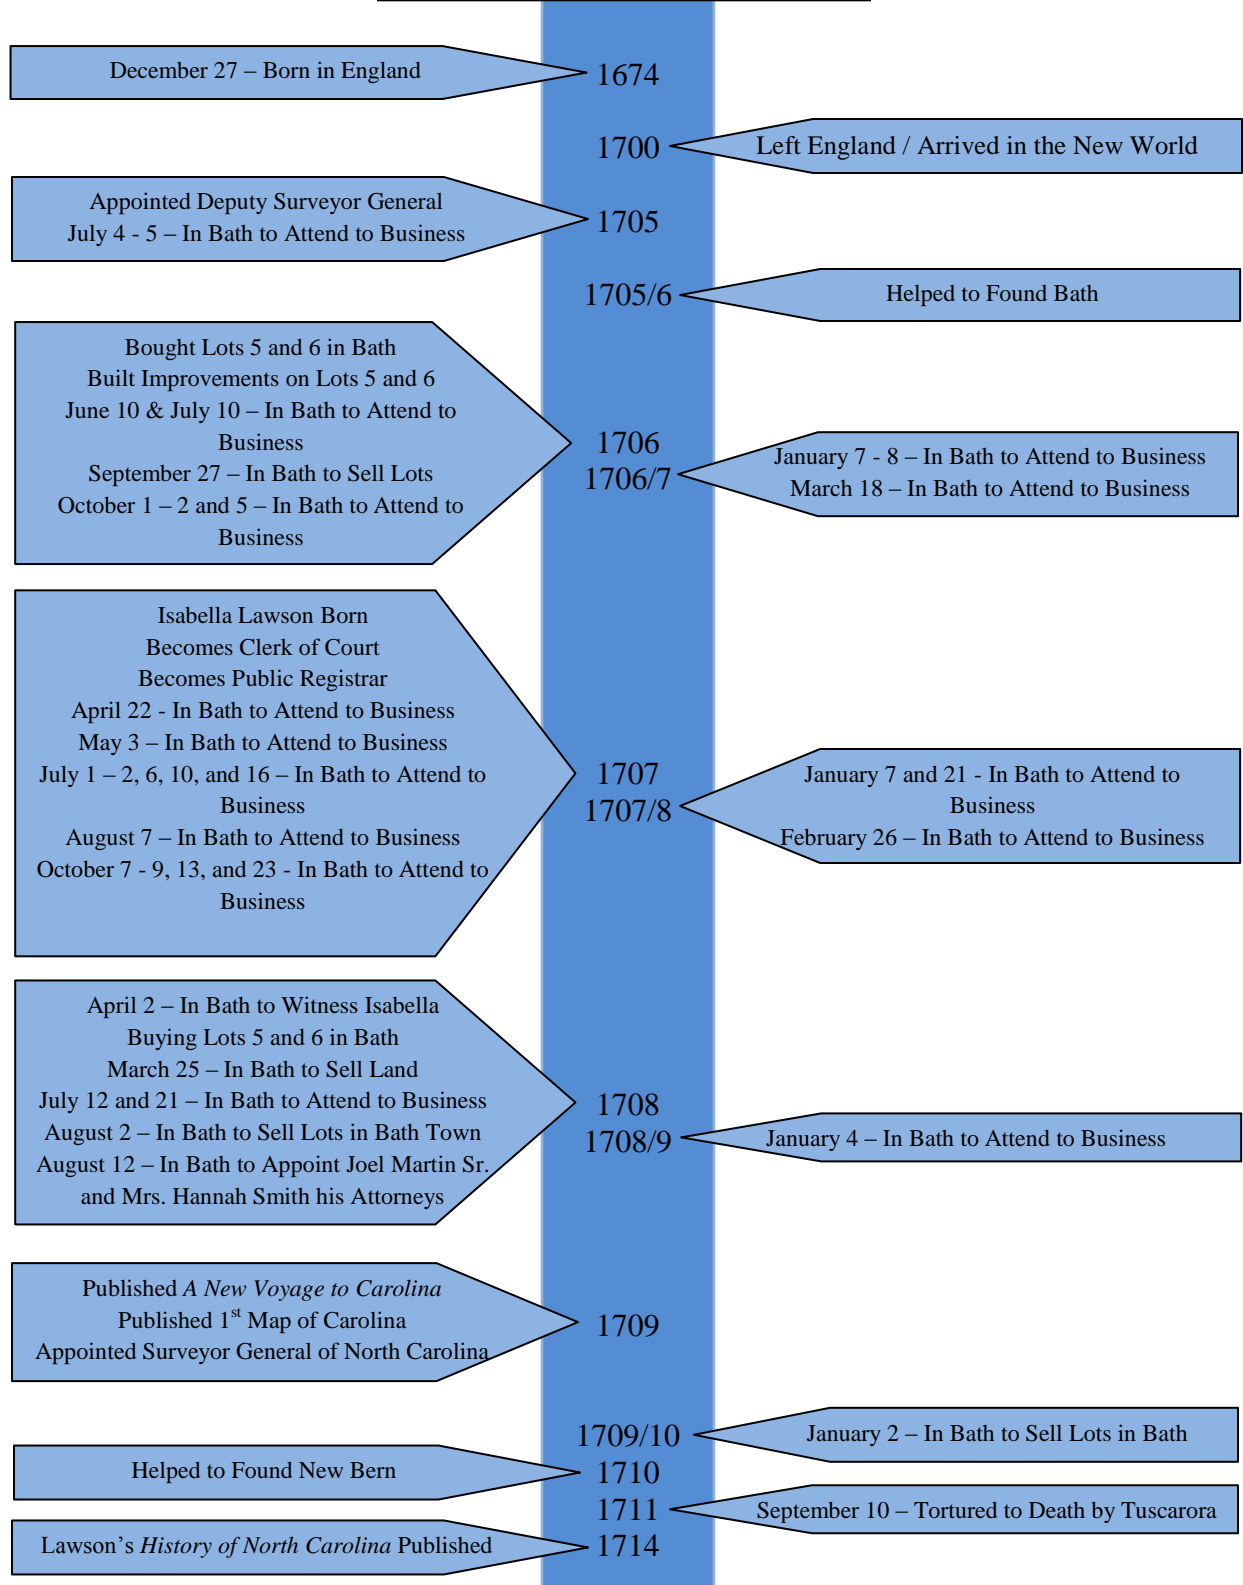

FIGURE 3: Time Line of Events from the Life of John Lawson

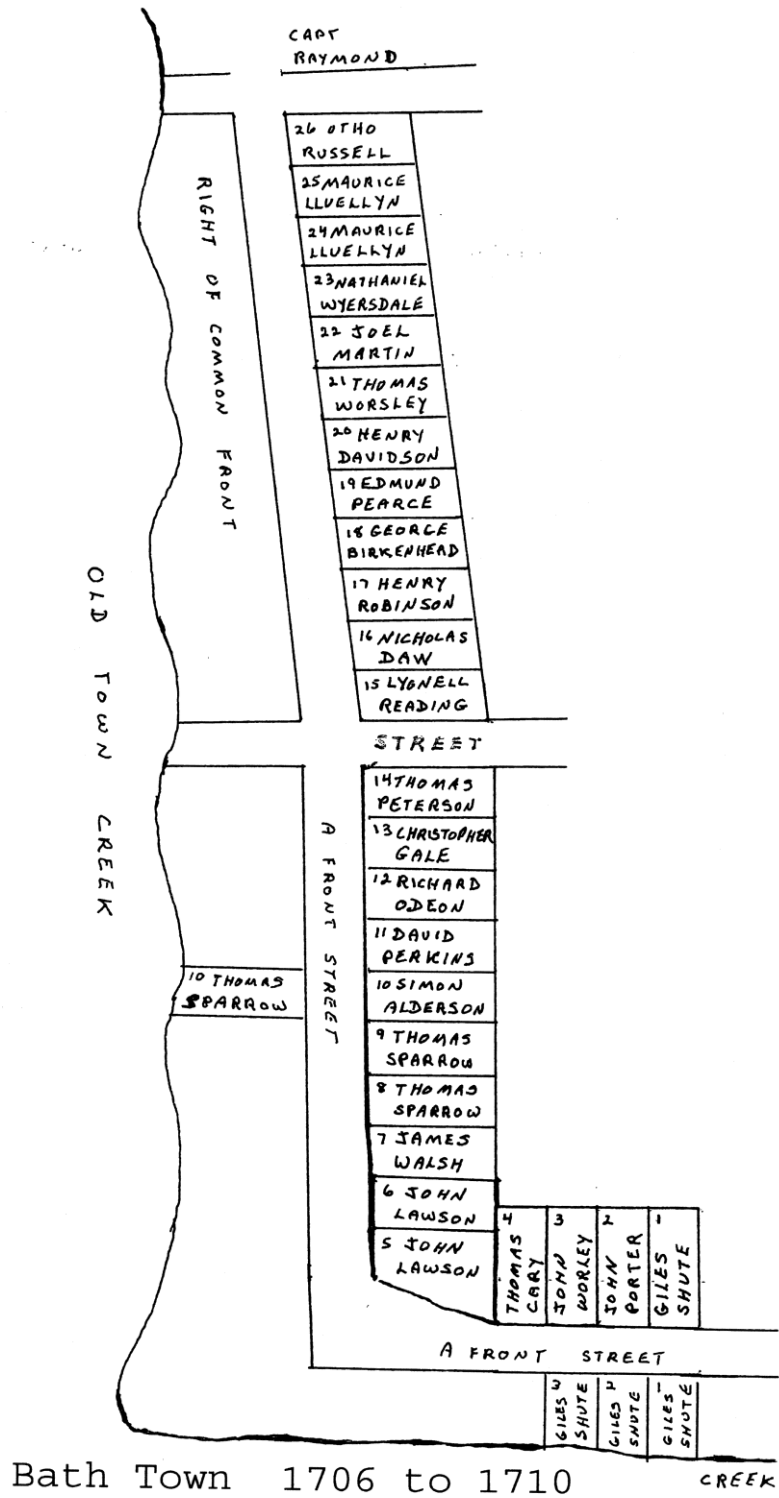

FIGURE 4: Map of Owner's of Bath Town Lots 1706 to 1710 (Norris 2003: 128).

Truewhite and Fulford

It is not clear how the property passed from John Lawson to M. Levi Truewhite or from Truewhite to John Fulford. However, there is evidence that John Fulford sold one or both lots to Isabella Lawson in 1708/9 (BCRD 1708/9:1.112-113). Both Truewhite and Fulford owned the lots for less than one year, and there is no record as to the price they paid for the lots or what was on the lots when purchased or sold.

Isabella Lawson

On April 20, 1708/9, a lot in Bath was purchased for the toddler Isabella Lawson (presumably by her father, John Lawson) from John Fulford that was “one Lot of land ... containing half an acre and four Pole ... situate in one of the front streets in Bath Town, and bounded Southerly by a Street and northerly by a lot of James Walsh, and fronted westerly by the main Street, and its front Land on the main creek” for “two Pounds current money” (BCRD 1708/9:1.112-113). Norris (2003 Deed: 231) states that this record of sale is referring to Lots Five and Six, and the description leads one to the same conclusion. However, at this time each lot in Bath was half an acre and four pole, thus two lots would have been one acre eight pole and the deed clearly states that the property purchased by Isabella Lawson from Fulford was “half an acre and four pole”, the size of one lot (BCRD 1708/9:1.112-113). Lot Six seems to be the logical choice because according to the deed it is bounded northerly by James Walsh and the only lot owned by James Walsh during the 1708/9 time frame is Lot Seven, which is directly north of Lot Six (Figure 4). However, Lot Five also seems to be a logical choice because the purchased lot is “bounded Southerly by a Street” (Figure 4) (BCRD 1708/9:1.112-113). Therefore, it is possible that there was a mistake in the measurements and Isabella actually purchased both Lots Five and Six with this deed, but they were considered as one lot and the

measurements were written incorrectly. Isabella was only a toddler at the time of purchase, but the deed was witnessed by John Lawson, so it seems reasonable that the land was purchased by him for her.

On January 17, 1715 commissioners John Drinkwater and John Clarke enacted the Act of Assembly that changed Bath Town lot sizes from half acre four pole to half acre and required lot owners to place a “habitable house” on lots in order to maintain ownership (BCRD 1715:1.246-247). Edward I of England determined that the length of a pole, or rod, was 16.5 feet, which means that each lot lost 66 feet (Burtch 2009:2-3). On March 25, 1717, John Lawson’s daughter, Isabella, repurchased the resurveyed Lots Five and Six and their fronts from town commissioners John Drinkwater and Thomas Harding (Figure 5). The lots with improvements were repurchased for 40 shillings and the fronts were repurchased for the sum of 20 shillings (BCRD 1717:1.220-221,226). Isabella owned Lots Five and Six for approximately 21 years and paid a total of two pounds and forty shillings for the two lots, which translates into \$962.00 in 2008 United States dollars. Isabella made a profit equivalent to \$11,562.50 on the properties as she sold them to John Jackson for the equivalent of \$12,524.50 in 1729, after her marriage to John Chilley, when she was living at Chilley’s plantation 18 miles outside of Bath Town (Norris 2003 Deed: 714; BCRD 1729:2.22-23; Logan 1745:10). This major increase in the price of the properties suggests that the properties were becoming more of an investment than residential properties. This change in property type is also supported by the fact that in 1715 Bath became the Official Port of Entry for North Carolina, raising the property value and increasing activity.

Jackson, Blackbourne, Crofton, and Worsley

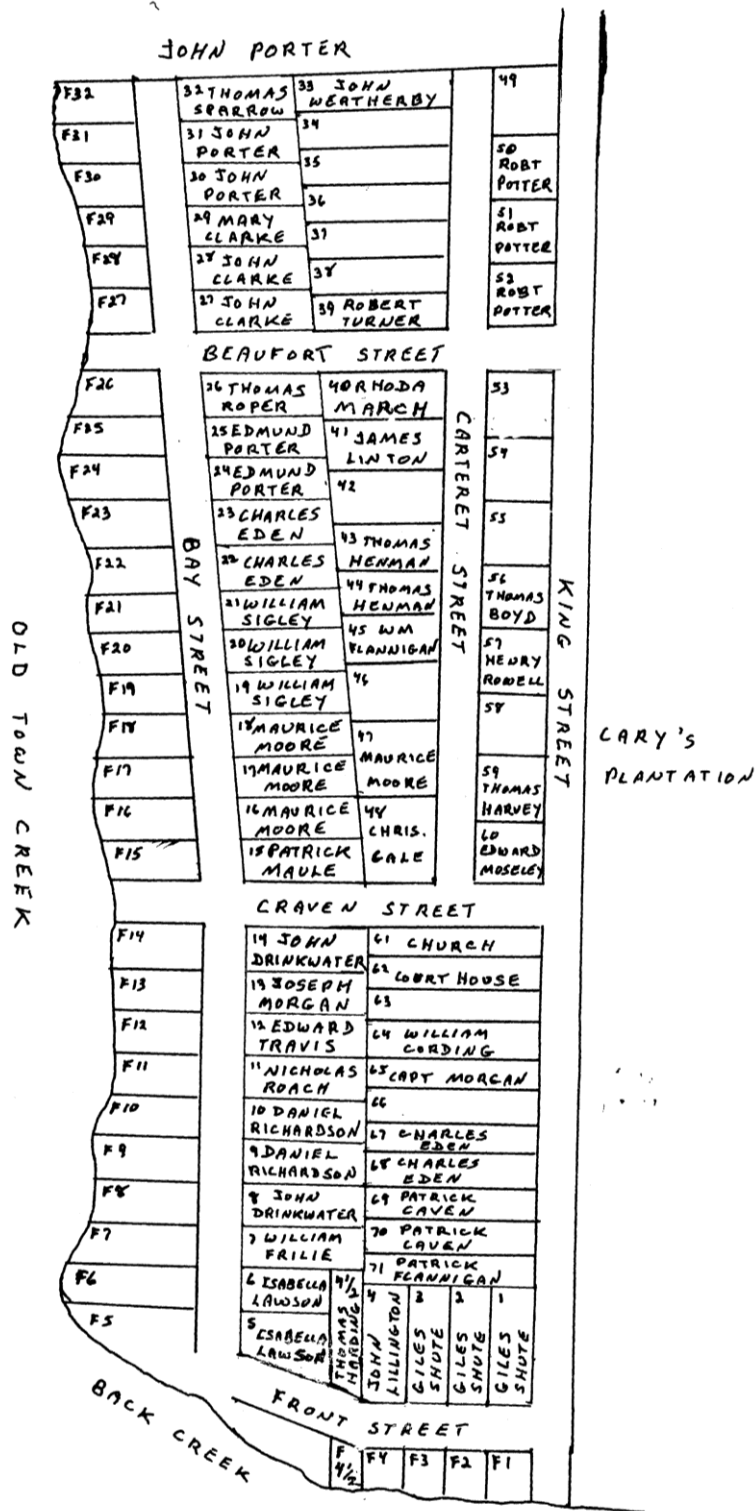

John Jackson purchased Lots Five and Six, with fronts and improvements from Isabella Lawson and John Chilley for 50 pounds current money on September 10, 1729, which translates

to \$12,524.50 (BCRD 1729:2.22-23; Norris 2003 Deed: 714). John Jackson was a lawyer of Bath Town and owned the lots for one year and three months (BCRD 1730:2.94-95). John and, his wife Ann Jackson, sold Lots Five and Six to Oliver Blackbourn and Henry Crofton for “Seventy pounds curt. Money of North Carolina” with fronts and improvements on December 10, 1730 (BCRD 1730:2.94–95). The improvements included “houses gardens orchards fences wood underwood timber timber-trees” (BCRD 1730:2.94-95). The Jacksons made a profit of \$6,345.00 in this sale of the lots, which shows that the property was still increasing in value.

Oliver Blackbourne and Henry Crofton were merchants of Beaufort County and sometime between December 10, 1730 and September 2, 1740, Oliver Blackbourn transferred his share of Lots Five and Six to Thomas Worsley, Junior. When Mr. Worsley, died John Hodgson and Thomas Blount, Mr. Worsley’s attorneys, and Henry Crafton sold Lots Five and Six to Edward Houit [Sic] [Howcott]. Crofton owned Lots Five and Six for almost 10 years and found them to be a good investment because upon selling it he made a profit equivalent to \$91,760.00 (BCRD 1730:2.94-95; BCRD1740:2.345-346). However, it seems as though there were a lot of improvements made to the property during this time.

Howcott, Calef, and Howcott

Edward Howcott purchased Lots Five and Six with “one Mansion House, with a brick chimney, one kitchen brick chimneys, one brick store house & cellars” for 500 pounds on September 2, 1740 (BCRD 1740:2.345-346). “one brick store house & cellar” and the fact that these lots were so close to the port helps to paint a clearer picture of the activity taking place on these lots during the Howcott ownership (BCRD 1740:2.345-346). The cellar was probably used to store goods, the store house probably refers to a mercantile for selling the goods, and the mansion house was quite possibly used as a public house.

Bath Town 1715 to 1729

FIGURE 5: Map of Owner's of Bath Town Lots 1715 to 1729 (Norris 2003: 129).

Howcott was an ordinary, or innkeeper, a plantation owner, and a deputy marshal (BCRD 1747:2.519; Cain 1981:372; Watson et al. 2005:57). William Logan traveled through Bath on his way from Pennsylvania to Georgia in October of 1745. Upon his arrival in Bath he stayed at the Howcott “publick House” which he found “very good” but he found Bath itself to “contain ab^t 30 houses, tho’ but very mean” (Logan 1745:10). He also states that the Howcott public house is where the ferry is kept and as he was traveling to New Bern the next morning he was quite possibly speaking of the ferry that was located at the north end of Bath which is very close to Lots Five and Six, which seems to place the Howcott public house on Lots Five and Six (Logan 1945:5-10).

Howcott owned the lots for approximately six years and five months. He then sold the lots to James Calef, losing the equivalent of \$83,250.00 in the process. Calef then owned the lots for approximately one year and nine months before selling them back to Howcott, without the store house. James Calef resold Lots Five and Six to Edward Hocut [Howcott] on November 7, 1748 for £100 proclaim money.² This sale included “One dwelling house, one Kitchen one Smoak house” and the land and fronts except “the brick Store house” and a small parcel of land surrounding the store house and leading to Water Street (currently Main Street) (BCRD 1748:3.2-3). This deed tells us that the only addition to the properties seemed to be the smoke house (BCRD 1748:3.2-3). Calef lost the equivalent of \$1,295 in the process, but when he sold the lots back to Howcott the sale did not include the store house and a small parcel of land surrounding the store house that was located on Lot Six. Calef was a merchant and Howcott was

² It is important to mention here that the deed looks as though it is discussing Lot 58, but the “58” could be “5&6” and later Martha Howcut [Howcott] sales both Lots Five and Six with no further evidence of the Howcuts [Howcott] buying Lot Six. Furthermore, if the deed were for Lot 58 there would need to be a store house dating to the same period on Lot 58 and there is no evidence of a an eighteenth century store house existing on Lot 58, and Lot 58 is not near any of the waterways (Figure 5). Another thing to consider is that in the Register of Deeds office in the Index book next to this deed it says that there is an error on the deed.

an innkeeper. Therefore, it makes sense for Howcott to retain the mansion house, which was quite possibly used as a public house, and for Calef to keep the store house as a mercantile.

After regaining Lots Five and Six, Edward Howcott owned them for one year and two months before his death. Edward Hocout [Howcott] left Lots Five and Six to his wife, Martha Hocout [Howcott], in his Last Will and Testament dated January 19, 1749. Martha Hocout [Howcott] in turn sold Lots Five and Six, with the exception of the store house, to William and Ann Mace on July 16, 1752 for £76 13 shillings and four pence, which is equal to \$18,500.00, for a loss of \$7,585.00 (BCRD 1748:3.102). Calef sold the store house and surrounding land to the merchants John Watson and Alexander Cairnes, of Suffolk, Virginia, for “thirteen pounds Sterling money” in 1754 (BCRD 1754:3.225-226; Watson et al. 2005:68).

So in values relative to 2008 United States dollars, Howcott buys it all for \$110,630.00, sells it all for \$27,380.00, and then buys it back without the store house for \$26,085.00. Calef buys it all for \$27,380.00, sells it without store house for \$26,085.00, and sells the store house for \$3,260.00, which means that the store house almost doubled in value during Calef’s ownership. Martha Howcott sells the lots without the store house to William Mace for \$18,500.00. Which all leads to the fact that the property dropped in value during this time period, but the store house gained in value.

Mace and Parkinson

William Mace, a merchant, and his wife Ann sold Lots Five and Six to James Parkinson on May 11, 1757 for “70 pounds proc: money” with the exception of the store house and 10 feet on each side (BCRD 1757:3.355). Mace lost the equivalent of \$3,811.00 on the sale of this property. On September 26, 1758 James Parkinson, who lived in New Bern at the time, sold Lots Five and Six with a store house and the land ten feet around the store house and other

improvements to Robert Palmer, who lived at the north end of town in the Palmer-Marsh House, for £80 Proclaim Money, gaining the equivalent of \$4,921.00 on the sale, which could have been the difference of adding the store house to the sale (BCRD 1758:3.440).

The Palmers

Both Robert Palmer and his son William were Customs Collectors and lived in the Palmer-Marsh House when they owned Lots Five and Six (Watson et al. 2005:54-86). On April 20, 1771, Robert Palmer gave William Palmer, his son, all of his property for five shillings and natural love and affection (BCRD 1771:4.348-349). It is inferred that this gift included Lots Five and Six as no evidence can be found that William Palmer sold these lots earlier and that Robert Palmer sold them at a later time. William Palmer sold the lots separately, selling Lot Five to the merchant firm Hill and Barrow in 1786 and possibly sold Lot Six to William Savage in 1788 (BCRD 1786:6.33-34). The closeness of these lots to the port made them especially popular with Customs Collectors, including Robert Palmer and William Palmer. However, it is known that these two did not live on the Lots Five and Six because their place of residence was the Palmer-Marsh House. After the ownerships of merchants and innkeepers the lots were owned by the Palmers for 28 years, during which time Robert owned many lots in Bath when he purchased Lots Five and Six but lived in New Bern when he gave them to his son William (BCRD 1758:3.440; BCRD1771:4.348-349).

Lot Five

Hill and Barrow

On April 15, 1786 William Palmer sold Lot Five with the front, houses, buildings, gardens, water ways, profits, improvements, and advantages for the sum of \$100 specie to the

merchants Hill & Barrow (BCRD 1786:6.33-34). It is not clear what happened to the merchant Hill, but John Barrow sold Lot Five with improvements and the water front for 100 dollars specie to Patrick Rourk on September 14, 1786 (BCRD 1786:6.34).

Rourk, Boyd, and Rice

Rourk, a merchant who lived in Washington, owned Lot Five for approximately seven months before selling it to William Boyd on April 2, 1787 for 10,000 feet of plank (BCRD 1787:6.311-312). It is unclear how Lot Five passed from William Boyd to Eber Rice, because the Beaufort County Court House was destroyed three times between 1862 and 1881 (Anglely 1799:33). However, it is known that on January 3, 1799 Eber Rice sold Lot Four and presumably Lot Five³ to Thomas Respass and Charles D. Crawford (BCRD 1799:1.245–246).

Respass and Crawford

Thomas Respass and Charles D. Crawford purchased Lots Four and Five for forty pounds, seventy shillings, and eight pence, which translates to \$5,661.00 (BCRD 1799:1.245–246). Thomas Respass lived at his plantation when he wrote his will dated November 12, 1799, and when he died he left his lands to Mary Ann Crawford, his great granddaughter (Beaufort County Clerk of Court [BCCC] 1799: Old Wills Book. 358–360). However, it seems that she was not of legal age and needed a guardian to oversee her property. The obvious choice to be her guardian was her father Charles D. Crawford (BCRD 1799:2-3.295-297; BCCC 1799: Old Wills Book. 358–360). Mr. Crawford sold Lots Four and Five one year and four months after the original purchase by Respass and himself, while Mary Ann was still a minor, as his name is

³ Lot Five is presumed because it is ripped from the copy of the original document and when Lot Five was next sold it was sold with Lot Four.

the only one on the deed and he lost the equivalent of \$407.00 in the deal (BCRD 1800:1.306–307).

Barton and Hanrahan

On May 2, 1800 Charles D. Crawford sold Lots Four and Five with houses, buildings, and appurtenances to Erik Barton, Mariner for 40 pounds seven shillings and six pence (BCRD 1800:1.306–307). Barton was from Rhode Island and sold the lots approximately one year later to Walter Hanrahan, losing the equivalent of \$1,114.00. Walter Hanrahan resided in Beaufort County and purchased Lots Four and Five on May 23, 1800 for \$234 (BCRD 1800:1.304-305). Hanrahan owned Lots Four and Five for approximately four years and 10 months before selling them to Charles Carrington, gaining the equivalent of \$21,945 in the process (BCRD 1805:8.48).

Carrington

Charles Carrington purchased Lots Four and Five for his son William Granbury Carrington on March 6, 1805 for 225 pounds (BCRD 1805:8.48). Lot Five was owned by Carrington for 25 years, but he was a resident of Washington when he sold the property (BCRD 1831:16.342). On August 5, 1830 William C. G. Carrington sold Lots Four and Five to Joseph Bonner for 175 dollars losing the equivalent of \$21,875 in the transaction (BCRD 1830:16.342).

Lot Six

It is unclear how Lot Six passed from William Palmer to William Savage because of the destruction of the courthouse and documents, but in 1788 William Savage owned Lot Six when he died in debt and his property needed to be sold to settle his estate. Sheriff John Kennedy was charged with the duty of settling Savage's accounts and accomplished this by selling Lot Six to John Armstead for 30 pounds and two shillings on August 9, 1788 (BCRD 1788:6.382-383). It

is also unclear how Lot Six passed from John Armstead to the Marsh heirs, due to the Beaufort County Court House fires, however there is evidence that Ann Marsh, Jas B. Marsh, William M. Marsh, and Samuel B. Marsh sold Lot Six to John Mixon Sr. for 65 dollars on January 1, 1830 (Angley 1979:33; BCRD 1830:16.97). On August 9, 1830 Joseph Bonner paid \$80 to John Mixon for Lot Six, and subsequently reunited Lots Five and Six (BCRD 1830:16.345–346). During this 60 year period none of the known ownerships were over a year in length and the property value increased by the equivalent of \$1,881.71.

Lots Five and Six

Bonner

The Bonner occupation is the longest and surest in the history of Lots Five and Six and lasted approximately 112 years (BCRD 1830:16.342; BCRD 1830:16.345–346; BCRD 1942:344.47-48). Lots Five and Six were purchased by Joseph Bonner in 1830 for a total of \$255, which translates to \$6,140.00 (Table 4). Lots Four and Five were purchased from William C. G. Carrington on August 5, 1830, and Lot Six was purchased from John Mixon on August 9, 1830 (BCRD 1830:16.342; BCRD 1830:16.345–346). Joseph Bonner left Lots Five and Six to his son Joseph Y. Bonner in his Last Will and Testament dated February 24, 1872 (BCCC 1872:1.164–165).

Joseph Y. Bonner became delinquent in his taxes in 1881, and Lots Five and Six reverted to Beaufort County, but Mr. Bonner paid his taxes and retrieved his lots so quickly that it is noted on the same deed (BCRD 1882:52.538-539). In Joseph Y. Bonner's will dated December 28, 1923 he leaves Lots Five, Six, and Seven to John R. Bonner (BCCC 1923:4.485).

In the will of John R. Bonner dated May 18, 1929, he leaves his home place⁴ with fronts to the Diocese of East Carolina of the Protestant Episcopal Church. These properties were intended for use as an orphanage (BCCC 1929:5.269). Lots Five and Six are not mentioned, but an investigation of the estate inventory shows that the only lot owned by John R. Bonner that was not vacant was the home place on Lot Five (BCCC 1929:5.269; BCCC 1931:7.288-290). However, due to the mental incapacity of John R. Bonner, his will was disallowed and his siblings, Miriam Harding and Jehu Bonner, acquired the property from the Episcopal Church (Angley 1979:114-115). On August 27, 1931 Miriam Y. Harding sold her share of the Joseph Y. Bonner home place, including Lots Four, Five, Six, and Seven, to Jehu E. Bonner for \$100 (BCRD 1931:289.638–639).

Jehu E. Bonner died intestate on May 27, 1935 and his property went to his heirs Katherine Clair and Hannah Leens, as named in his divorce settlement of October 27, 1931 (BCRD 1935:291.112–114; BCRD 1935:Vol.20.33). It is important to note that L. R. and Helen Smith are not mentioned in the divorce settlement, but take part in the selling of Lots Five and Six (BCRD 1935:291.112–114; BCRD 1942:344.47-48). L. R. and Helen Smith and the heirs of Jehu E. Bonner sold Lots Five and Six to Joseph H. Norman on April 8, 1942 for 1,250.00 1942 United States dollars, which translates into \$16,500.00 in 2008 terms (BCRD 1942:344.47-48).

Norman

The Norman family held the property for 18 years, and Joseph Norman's death certificate states that his address is Main Street in Bath, North Carolina (BCRD 1942:344.47-48; BCRD 1949:Vol.34.293; BCRD 1960:511.437-442; BCRD 1960:511.432–436). When Joseph H.

⁴ The Bonner home place is assumed to be Lots Five and Six because these lots passed through so many generations of Bonners and are referred to as the home place of Joseph Y. Bonner in subsequent deeds.

Norman died intestate on June 23, 1949, possession of Lots Five and Six passed to his wife Marie Williams Norman (BCRD 1949:Vol.34.293; BCRD 1960:511.437-442). Marie Williams Norman also died intestate on July 3, 1959, and her possession passed to her and her husband's children. The heirs of Joseph Hunter and Marie Williams Norman were William Howard, Roger Atkinson, Robert Boyd, Cary Patterson, and Joseph Hunter III (BCRD 1960:511.437-442; BCRD 1960:511.432-436). William Howard, Roger Atkinson, Robert Boyd, and Joseph Hunter III sold their shares of the property on January 21, 1960 to the Beaufort County Historical Society for the sum of \$24,000.00 (BCRD 1960:511.437-442). Cary Patterson Norman was considered incompetent and was represented by Commissioner Bryan Grimes in the selling of his portion of Lots Five and Six on February 24, 1960 to the Beaufort County Historical Society for \$6,000.00 (BCRD 1960:511.432-436). This means that the Beaufort County Historical Society paid a total of \$30,000.00 in 1960, which is the equivalent of \$218,000.00 in 2008.

Beaufort County Historical Society and the State of North Carolina

Lots Five and Six were purchased by the Beaufort County Historical Society for restoration in 1960, and the state of North Carolina bought Lots Five and Six from the Beaufort County Historical Society on January 13, 1965 for the sum of one dollar (BCRD 1965:577.396-398). Together they have owned the property for the past 50 years, and it has not been occupied during that time frame (BCRD 1960:511.437-442; BCRD 1960:511.432-436; BCRD 1964:577.396-398).

Chapter 3: Archaeological Background

Previous Archaeology

Bath

Compliance

The Palmer-Marsh house has been the subject of much of the archaeology done in Bath. Stanley South led excavations there in 1960 and 1965 (North Carolina Office of State Archaeology [NCOSA] Database 2008). The 1960 excavations were in the north yard and uncovered a basement that predated the Palmer-Marsh house and an eighteenth century well (Baicy 2003:65). The 1965 excavations were in the garden and between the smoke house and the dwelling house (NCOSA 2008). These excavations found a nineteenth or twentieth century shell walkway from the Palmer-Marsh House to the smoke house (South 1965:4). Carnes-McNaughton (2002) also excavated in the south yard of the Palmer-Marsh House to see if the porch was original to the house and found that there have been several porches, but all dated to the twentieth century and none of them were original to the Palmer-Marsh House.

The Indian village of Secotan is thought to be located on the waterfront in Bath. There have been two attempts to find it. The first was performed by Bennie C. Keel in 1964 and the second was performed in 1968 by John L. Mattson (Baicy 2003:61; NCOSA 2008). However, both investigations determined that this was not the location of Secotan (NCOSA 2008).

Several other excavations were performed for compliance as part of construction projects, but few reports were found. In 1976 D. Katherine Beidleman and in 1991 Terry Harper performed tests of the Palmer-Marsh House yard for the installation of electrical lines, and nothing of significance was reported (Baicy 2003:61-69; NCOSA 2008). In 1993, Linda F. Carnes-McNaughton performed clearance excavations for telephone and electrical lines and in

1994 for drain line replacement at the Palmer-Marsh House. Again, nothing of significance was reported (Baicy 2003:62).

The current site of the Van Der Veer house has also been the subject of Historic Bath's archaeology. In 1971, Stuart C. Schwartz investigated the current site of the Van Der Veer House prior to the house's move to its current location, near the visitor's center. Terry Harper monitored the installation of electric lines at the Van Der Veer House in 1978, and concluded that no archaeological features were found and the few datable artifacts that were found were whiteware (Harper 1984a). In 1997 and 2000, Steve Allen performed excavations for a phone line and a new drain line on the site (Allen 1997; 2000). The 1997 excavation found artifacts ranging from the late eighteenth century through the early twentieth century in the eastern end of the trench (Allen 1997). The 2000 excavation revealed no artifacts or features (Allen 2000).

Excavation was performed prior to the construction of the visitor's center in 1977 by Thomas Funk, but nothing of significance was uncovered. In 1986 and 1987, clearance excavations were performed by Terry Harper and Linda Carnes at the Historic Bath Rental House to make the site ready for construction activity. In 1998, a survey of the African Methodist Episcopal Zion Church lot was performed by Steve Allen, and a possible outline of the church was found in the form of 15 brick piers (Baicy 2003:61-62).

In 1979 John D. Broadwater, David K. Hazzard, and Martha W. McCartney and in 1978 Terry Harper performed testing at Bonner Point prior to bulkhead construction. These excavations yield a partially submerged building measuring 113 feet by 74 feet and post-holes dating from the early nineteenth century (Broadwater et al. 1979). In 1984, Terry Harper again investigated Bonner Point for the bulkhead and found possible unmarked graves (Harper 1984b).

Bonner Point was also investigated in 1982 by Deborah A. Burrell prior to construction of another protective sea wall, but the excavation was incomplete (Baicy 2003:61).

Academic

The East Carolina University Anthropology Department has undertaken many archaeological projects in Bath, all under the direction of Dr. Charles Ewen. In 2002, the Court House Lot (currently referred to as Lot 14) was the subject of research performed by Summer Ventures students, and it was determined that the lot was too highly disturbed to yield evidence of the courthouse (Baicy and Ewen 2003: 25-26). In 2005, three excavation units were opened at the St. Thomas Episcopal Church prior to renovation of the drainage system, and even though three or four graves were discovered, they were far enough from the church to allow renovations to continue (Smith 2006).

The Bath Survey was a shovel test investigation of all the lots of Historic Bath, and it was started during the summer of 2005 and continued until May 2007. This survey was begun to determine which eighteenth century lots were actually improved. However, conclusions concerning this investigation are still being extrapolated. In 2010, additional lots were surveyed by Summer Ventures students.

Lots Five and Six

Compliance

Restoration efforts at the Bonner House in the 1960s uncovered the visible chimney foundation from what is popularly believed to be the remnants of “Lawson House”; however no notes or artifacts from this excavation could be located. The first known mention of archaeology being needed on Lots Five and Six was suggested by J. C. Harrington of the National Parks

Service on June 2, 1960. Several other investigations took place during the late twentieth century as the Bonner House was being renovated, including Terry Harper's 1992 investigations for the realignment and construction of the fence, but no archaeological deposits were revealed (Baicy 2003:62).

Academic

The East Carolina University Anthropology department has performed five archaeological investigations on Lots Five and Six in Bath, for nearly a decade. In the spring of 2003, Dr. Charles R. Ewen's Historical Archaeology class surveyed the Bonner House Lot to determine where excavation units should be placed during the 2003 field school. The field school of 2003 opened 18 excavation units in and around the ballast stone feature and the northwestern yard of the Bonner House. In 2004, Summer Ventures students continued this endeavor, opening five more units. During the Field School of 2007, Summer Ventures of 2008, and the Field School of 2009, a cellar that had been located during the 2005 Historic Bath Survey was excavated on Lot Six. In 2010, Summer Ventures students excavated two units in the northwestern corner of the Bonner House yard, to investigate reports of a building foundation. Also in 2010, Summer Ventures students surveyed areas of the Bonner House yard that showed high concentrations of early eighteenth century artifacts during the 2003 Historical Archaeology Class Survey.

Methodology

The artifacts used in this analysis were excavated over the span of three field seasons, all under the direction of Dr. Charles Ewen. The artifacts recovered from these excavations were processed and analyzed at the East Carolina University, Phelps Archaeological Laboratory. All

field and lab procedures were standard, as outlined by the procedures manuals, for all excavations and analyses (Ewen 2003c; 2005).

Shovel Test

When performing a shovel test, a spade was used to remove a sod cap that was approximately one foot in diameter. Any excess dirt and possible artifacts were then carefully scrapped off the bottom of the sod cap. The test pit was then dug to the depth of sterile soil. The soil that was removed from the pit was screened through quarter-inch screen over a tarp to keep the backfill contained. Artifacts found during the screening process were placed in plastic bags. The artifact bags were labeled with the site name, shovel test name, field specimen number, date, excavator's initials, and comments. Also placed in the bags were paper tags with the same information in a separate plastic bag. After sterile soil was reached, information about the unit was recorded on a shovel test pit form (Figure 6). Information that was recorded on the shovel test form included the project name, the initials of the excavators, the date, the depth and the description of each soil layer, artifacts recovered, uncollected items, and comments. Soil color and descriptions were derived from the Munsell® Soil Color Chart. After pertinent information was recorded on the form, the pit was refilled by dumping the screened soil from the tarp into the hole, and the sod cap was replaced.

Excavation

Units were laid out on a grid using a total station. Units were designated by the southeastern corner in relation to the datum, which was located three feet outside the southwest corner of the Bonner House fence. Units were dug with a flat shovel using the schmitting method to remove very thin layers of earth to try to find artifacts *in situ*. *In situ* means finding artifacts

in their original position and recording their position, in hopes of better understanding the context of the artifacts. When artifacts were found *in situ*, they were shot in using the total station to facilitate mapping the artifact within the level and to get the depth of the artifact. The depth of *in situ* artifacts and level bases were measured by the total station and recorded as depth below surface. Dimensions were recorded in Engineer's Scale, which is the Imperial measurement of a foot divided into tenths. Levels were dug in arbitrary levels within natural zones. This means that each level was dug in 0.25 foot intervals until a new natural zone was revealed. Each provenience was referred to as its unit name, zone, and level. Once the approximate depth of each level was reached, a trowel was used to clean the unit for mapping and photographing. When a photograph was taken, an arrow was used to delineate north and a photo board was employed to express the site name, site number, unit name, zone number, level number, and the date for informational purposes.

Most artifacts were not found *in situ*, so screening was necessary to find any artifacts that may have been missed when schutting. Soil was sifted through a quarter-inch screen, and found artifacts were placed in a bag labeled with the site name, site number, unit name, zone number, level number, field specimen number, excavators' initials, and the date. A tag with the same information on it was then placed in its own small bag and placed in the artifact bag to ensure that the provenience of the level was maintained. Fragile and extra small artifacts were packed in film canisters or separate small bags with cotton or other packing material to ensure their safety.

After the excavation of a level was complete a level form was completed (Figure 7). The level form was where all pertinent information was recorded. On the level form the excavators recorded the date, the site name, the unit number, the unit dimensions, the zone number, the level

number, the recorder, the excavators, the base elevations of the four corners and the center, the excavation techniques, a description of what was discovered, any relevant field specimen numbers, any relevant photo log numbers, the soil types, and a map of the base of the unit. Soil types were cataloged using the Munsell® Soil Color Chart.

Feature

If a feature was uncovered, it was dug separately to facilitate preserving as much information as possible. Only half of interesting features were dug at a time in order to see the cross section of the feature and to map the profile of the feature. Features were given unique field specimen numbers and unique feature numbers. Feature forms were very similar to level forms but also included the feature number and the feature dimensions (Figure 8). Features are smaller than excavation units; therefore flat shovels did not work and usually trowels were also too large, so spoons, toothbrushes, and other small digging implements were used.

Laboratory

Artifacts from these excavations were returned to the East Carolina University, Phelps Archaeology Lab, washed and rough sorted by multiple students. Artifacts were washed and sorted using Ewen's methodology. The bag of artifacts was first emptied onto a tray to be sorted into washable and non-washable artifacts. Non-washable artifacts include metal objects, floral and faunal remains, and any objects which may have value for dating or use-ware tests. The empty bag is then placed on the drying tray with the non-washable artifacts to await the arrival of the washable artifacts after cleaning. Washable artifacts were then placed in a bowl of water to soak and then were washed either with fingers or a brush, depending on the fragility of the artifact. Artifacts were rough sorted as they were placed on the drying tray. Rough-sort

categories could include ceramics, brick, glass, floral material, stone, faunal material, and miscellaneous objects.

The artifacts were then catalogued by various students, including Courtney Fuhrmeister, Lindsey Flood, Mattie Rasberry, and Nancy Jo Mullens. When cataloging artifacts, the field specimen number, the artifact count, the group, the class, the material, the type, the variety, the color, the element, the decoration, the weight in grams, the size, and any other pertinent remarks were recorded (Appendix C). The field specimen number was recorded in order to ensure the integrity of the provenience. All pertinent information was recorded for all artifacts, but all categories did not relate to all artifacts. If a category did not relate to an artifact, that section was simply left blank on the cataloging form. The artifact count, weight in grams, and size were recorded to know how many artifacts and their approximate weights and sizes. The group was the possible use for an artifact when it was employed, (e.g., architecture, kitchen, or biological). The class referred to the type of artifact (e.g., fragment, jar, nail, or pencil). The material was what the artifact is made of (e.g., iron, ceramic, lithic, or brick). The type refers to what type of artifact it is in its given material (e.g., a ceramic type might be Staffordshire Slipware, Transfer Printed Pearlware, Annular Ware, or White Salt Glazed Stoneware). The variety helped to further identify the type (e.g., for example: English Soft Paste Porcelain, with English being the variety of Soft Paste Porcelain, or Flat Head being the variety of an Iron Wire Nail). The color was obvious, but it is important to note that if more than one color was present it was cataloged as polychrome. The element referred to what kind of object or what part of an object the artifact was (e.g., rim, neck, body, stem, or base. The decoration gave the archaeologist further information about the type of artifact (e.g., Banded is the type of decoration for some Annular Wares and Shell Edged is the decoration for some Pearlwares). The remarks section is the place

to put any other notes the cataloger may find pertinent. All cataloging took place in the East Carolina University Phelps Archaeology Laboratory. A provenience guide (Appendix B) was then created by dating the chronologically diagnostic artifacts and assigning a terminus post quem [TPQ], which is the date after which the latest datable artifact was produced (Ewen 2003a).

Chapter 4: Results

2003 Historical Archaeology Class Survey

The 2003 Historical Archaeology Class Survey took place on March 28, 2003 on historic Lot Five, and its purpose was to establish a grid and to do reconnaissance to determine where excavation units should be placed for the 2003 East Carolina University Field School. The principal investigator was Charles R. Ewen, PhD, and the graduate assistants were Tara Potts, Keith Heinrich, and Dan Baicy. The field crew consisted of East Carolina University and Craven Community College students. The datum was placed outside the fence at the southwest corner of Lot Five on the corner of Front and Main Streets. Shovel tests were placed in 30 foot intervals resulting in 21 successful shovel tests (Figure 9). All 21 shovel tests were positive for artifacts, 20 of which had datable artifacts ranging from the prehistoric era to the modern era (Fuhrmeister 2003a).

Stratigraphy

This reconnaissance mission gave an idea of the stratigraphy of the Bonner House Lot. Across the lot there were three or four zones, with the last zone being sterile subsoil. The typical stratigraphy of the 2003 Historical Archaeology Class Survey shovel test pit had the bottom of Zone One at approximately 0.75 feet, the bottom of Zone Two at approximately 1.25 feet, and the bottom of Zone Three was at approximately 2.0 feet. Typically the soil colors of Zone One were dark and each successive zone got lighter, with Zone One typically being black, with Zone Two typically being dark brown, and Zone Three being yellowish brown (Figure 10).

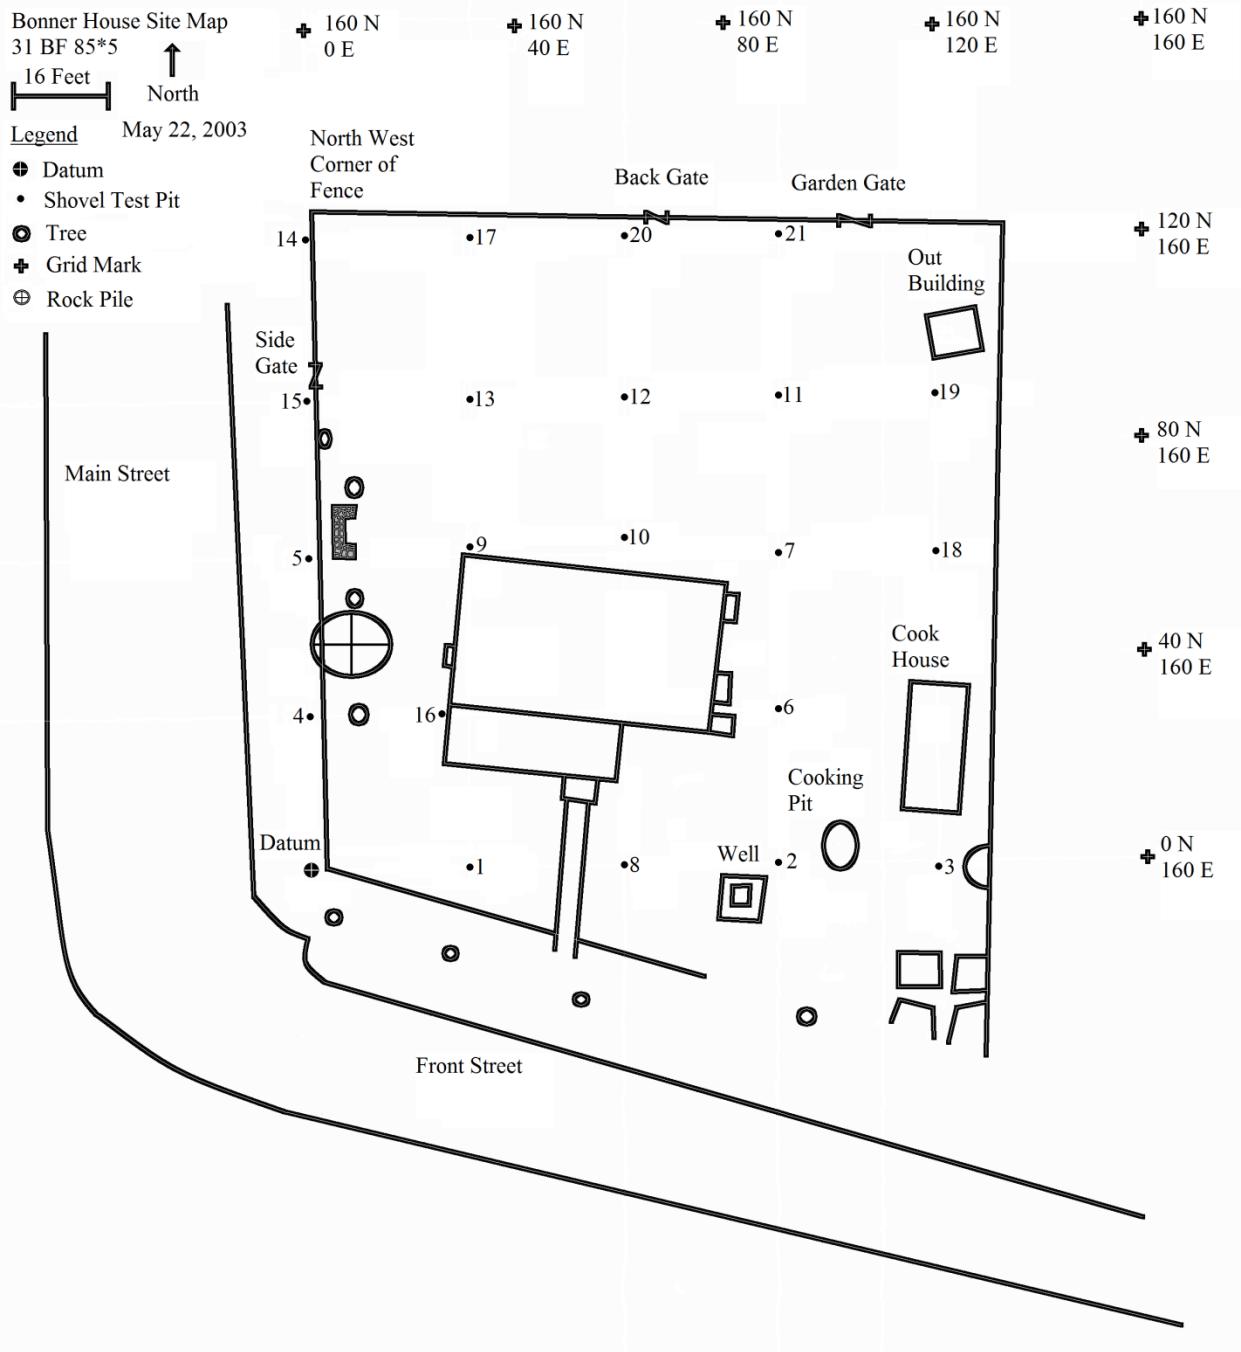

FIGURE 9: 2003 Historical Archaeology Class Survey Map (Anonymous 2003).

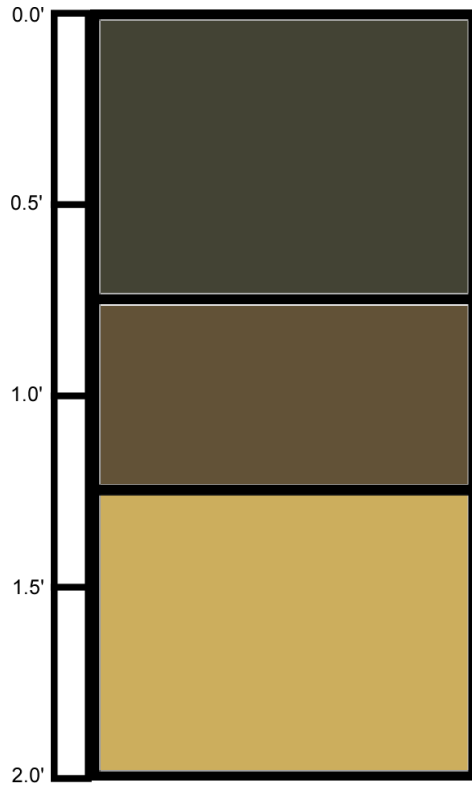

FIGURE 10: 2003 Historical Archaeology Class Survey Typical Stratigraphy.
Artifacts

Artifacts that could be dated to the early eighteenth century were spread throughout Lots Five and Six. However there was a heavier concentration of early eighteenth century artifacts to the north of the Bonner House (Figure 11). This was approximately 30 feet to the north and 50 feet to the east of the ballast stone feature in the northwestern part of the yard, but it was only 30 feet to the north and 10 feet to the east of the ballast stone feature found in the back of the Bonner House during the 2003 Field School.

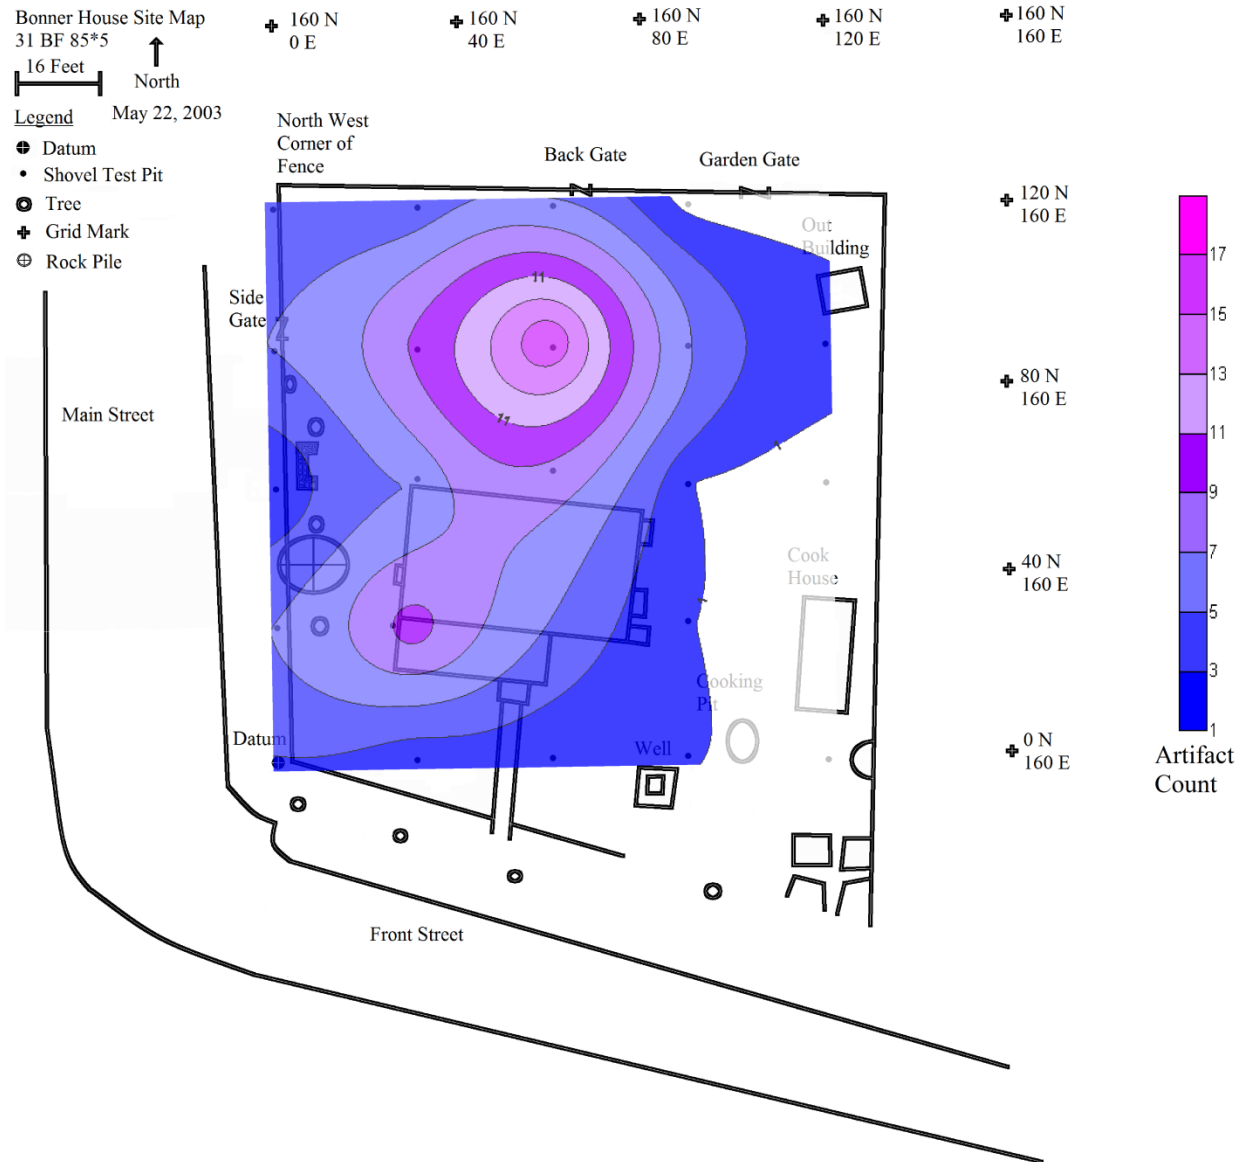

FIGURE 11: Distribution of Early 18th Century Artifacts on the Bonner House Lot.

2003 East Carolina University Field School Excavation

The purpose of the 2003 field school was the investigation of a ballast stone feature in the northwestern yard of the Bonner House (Figure 12). Excavation was performed using standard excavation methodology. The datum established for the Historical Archaeology Class Survey (designated as 0N/0E with 100 feet arbitrary elevation) was located three feet west of the southwestern corner of the fence surrounding the lot (Figure 9). It was discovered throughout

the field season that small errors had been made during triangulation of the units, thus the points were reshot with the total station and replotted on the site map (Ewen 2003b). Except where noted, the western profile was mapped prior to closing a unit (Fuhrmeister 2003a). The field season lasted from May 21 to June 24. A total of 18 units were excavated during the 2003 field school (Figure 13). Units 60N/10E and 65N/10E were combined for the excavation of Feature Seven. During the sixth and final week of field school, all units were backfilled (Ewen 2003b).

Stratigraphy

There were four zones throughout the site, with Zone Four being sterile subsoil. Zone One was generally a very dark brown with some mottling and lighter areas that were generally features, and the bottom ranged from approximately 0.5 feet to 0.75 feet in depth. Zone Two was lighter than Zone One, but most of the areas that displayed mottling in Zone One also displayed mottling in Zone Two, showing further disturbance. The base of Zone Two was between 1.0 feet and 1.25 feet. Zone Three was lighter than Zone Two and its base ran from 1.5 feet to 1.6 feet. The stratigraphy found during the 2003 Field School seemed to confirm the stratigraphy found during the 2003 Historical Archaeology Survey (Figure 10).

Features

Features 5, 13, 15, and 42 in Zone Two Level One were possibly part of the modern attached kitchen of the Bonner House. These features help to place the Bonner occupation at the bottom of Zone One and at the top of Zone Two (Figure 14).

Ballast Stone Features

Feature 29 was in three parts, two in Zone One Level Three and one in Zone Two Level One (Figures 15 and 16). The first two parts were sand and covered the ballast stone feature in

the north-central Bonner House Yard, showing that this ballast stone feature and its relative in the northwestern portion of the yard were not part of the Zone One occupation of the Bonner House Lot. The third portion of Feature 29 covered the ballast stone feature in the central yard, and verified that the ballast stone feature was from an earlier time than Zone Two.

Feature 39 in Zone Two Levels Two, Three, and Four (Figure 17) and Feature 41 in Zone Two Level Three (Figure 18) are builder's trenches associated with the ballast stone feature in the north-central yard. Feature 37 in Zone Two Levels Three and Four (Figure 18) and Feature 33 in Zone Two Levels Two and Three (Figure 17) are builder's trenches associated with the ballast stone feature in the northwest yard of the Bonner House. Features 39 and 41 were not excavated to the base of the ballast stone feature in the north-central Bonner House yard, but Features 33 and 37 were fully excavated and sit on sterile soil with the ballast stone feature in the northwestern Bonner House yard. Features 39 and 41 had no datable artifacts. Feature 37 contained three datable artifacts: one sherd each of Plain Delftware (TPQ: 1640), Black Lead Glazed Coarse Earthenware (TPQ: 1490), and Rhenish Blue and Gray Stoneware (TPQ: 1575), all of which could easily date to either of the Lawson occupations. Feature 33 had six datable artifacts, three of which were Blue on White Delftware (TPQ: 1630). The others were Lead Glazed Redware (TPQ: 1500) and Staffordshire Slipware (TPQ: 1675) (Table 5). All of these artifacts are linked to the early eighteenth century except for the one sherd of Plain Pearlware (TPQ: 1780), which could easily be a displaced artifact.

Artifacts

All of the units were disturbed to some degree. This research will focus on the least disturbed units (Figure 19). Zone One of these least disturbed units showed a long-term occupation. With a date range from the late eighteenth century to the twentieth century, artifact

types with less than 10 artifacts were removed as outliers, because the majority of types had a count greater than 20 (Table 6). Artifact types with a count greater than 100 in Zone One were Staffordshire Slipware (TPQ: 1675), White Salt Glazed Stoneware (TPQ: 1720), Lead Glazed Coarse Earthenware (TPQ: 1490), and Wire Nails (TPQ: late nineteenth century). Zone Two artifacts had a date range of the late eighteenth century to the early nineteenth century. Any artifact type with less than 10 in Zone Two were removed as outliers, because the majority of types had a count greater than 10 (Table 7). The datable artifact types that were found in excess of 100 in Zone Two were Iron Cut Nails (TPQ: late eighteenth century), White Salt Glazed Stoneware (TPQ: 1720), Staffordshire Slipware (TPQ: 1675), Blue on White Delftware (TPQ: 1630), and Lead Glazed Coarse Earthenware (TPQ: 1490). Zone Three artifacts had a date range of the eighteenth century (Table 8). No artifacts were removed because the only three types of datable artifacts in Zone three were Plain Delftware (TPQ: 1640), Plain Creamware (TPQ: 1762), and Banded Annular Ware (TPQ: 1785).

TABLE 8: 2003 Field School Excavation Zone 3 Datable Artifacts.

2004 Summer Ventures Excavation

The purpose of the 2004 Summer Ventures program was to further investigate the ballast stone features in the Bonner House yard. This field season utilized the same datum and field procedures as the previous year and ran from June 22 to July 10. On June 22, the 2003 Field School grid was reestablished. Five units were excavated during the 2004 Summer Ventures Excavation (Figure 20). All units were disturbed to a certain degree. The units that were disturbed to a lesser degree were 70N/50E, 75N/45E, and 75N/45-50E (Fuhrmeister 2004a).

Stratigraphy

The base of Zone One was at 0.75 feet and was generally dark with some mottling. Zone Two was lighter with the base at approximately 1.2 feet. Zone Three was lighter than Zone Two and the base was at approximately 1.5 feet (Figure 21).

Artifacts

Because the site was highly disturbed, artifacts from the most disturbed units were removed when doing artifact analysis for dating purposes. Zone One had a date range of the nineteenth century and twentieth century; any artifact type with a count less than 10 was removed from analysis as an outlier (Table 9). Datable artifact types with a count greater than 50 were various Delftware (TPQ: 1630), White Salt Glazed Stoneware (TPQ: 1720), Plain Creamware (TPQ: 1762), Undecorated Ironstone (TPQ: 1840), and Cut Nails (TPQ: Late eighteenth Early nineteenth century). Zone Two artifacts showed a date range of the eighteenth century (Table 10). Artifact types with a count higher than 25 were Blue on White Delftware (TPQ: 1630), White Salt Glazed Stoneware (TPQ: 1720), and Plain Creamware (TPQ: 1762). A wine bottle seal was found in Zone Two Level One in unit 75N/50E with the name I. Elliot and the date of 1741, which points to Zone Two being associated with the mid eighteenth century

(Figure 22). Zone Three had a date range of the early eighteenth century (Table 11). The only artifact type with a count higher than 10 in Zone Three was Blue on White Delftware (TPQ: 1630).

TABLE 11: 2004 Summer Ventures Excavation Zone 3 Datable Artifacts.

2005 East Carolina University Field School Historic Bath Survey

The purpose of the Historic Bath Survey was to determine the location of eighteenth century inhabited lots (Ewen 2005:1). These shovel tests were dug with standard shovel test procedures, and were placed in 15 foot intervals. The map for the Intern House Lot was drawn on May 23 and Bonner Point was mapped on May 26 (Figures 23 and 24). These shovel tests were dug during the 2005 field school between May 19 and June 7. The primary objective of examining the phase one inquiries of Bonner Point and the Intern House Lot, in this thesis, is to determine if there was any activity on these lots when they were in the possession of John or Isabella Lawson.

Intern House Lot

The Intern House Lot (Historic Lot Six or Survey Lot One), was intermittently owned by a member of the Lawson family, John or his daughter Isabella, during the years of 1705/6 to 1729. It is of interest to this thesis because it is important to determine if there was any activity on this lot during the early eighteenth century.

Stratigraphy

The typical shovel test profile on the Intern House Lot had three levels with Zone One being the darkest and ending at about 0.3 feet, with Zone Two ending at about 1.0 feet and being lighter than Zone One, and Zone Three being the lightest color and ending at 1.5 feet (Figure 25).

Artifacts

Artifacts that most likely dated to the early eighteenth century are throughout the Intern House Lot, including various Delftwares, Staffordshire Slipware, various stonewares, and Lead

Glazed Coarse Earthenware, with the highest concentrations being on the northeast corner of the Intern House and in the southern portion of the lot toward the Bonner House Lot (Figure 26).

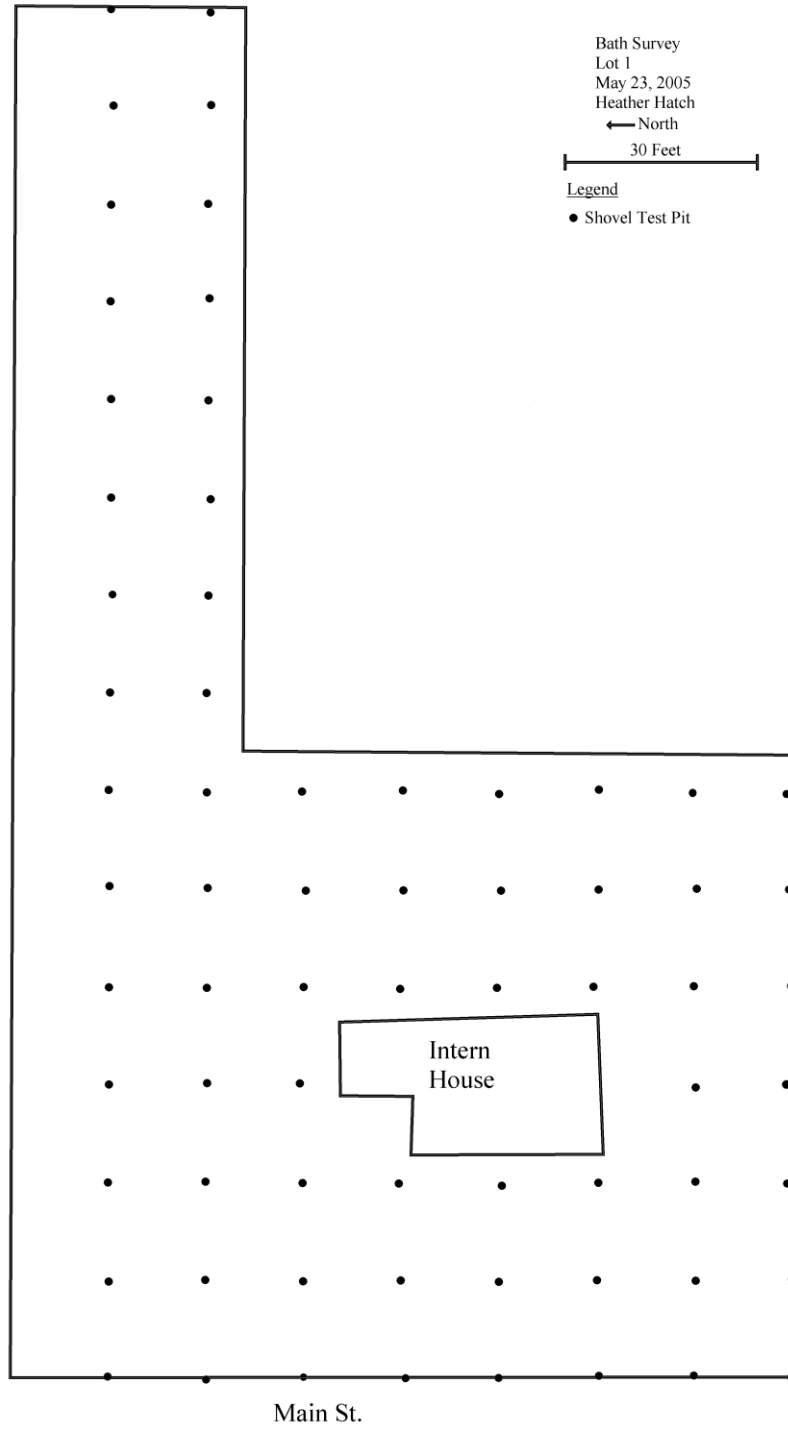

FIGURE 23: 2005 Historic Bath Survey Map of the Intern House Lot (Hatch 2005a).

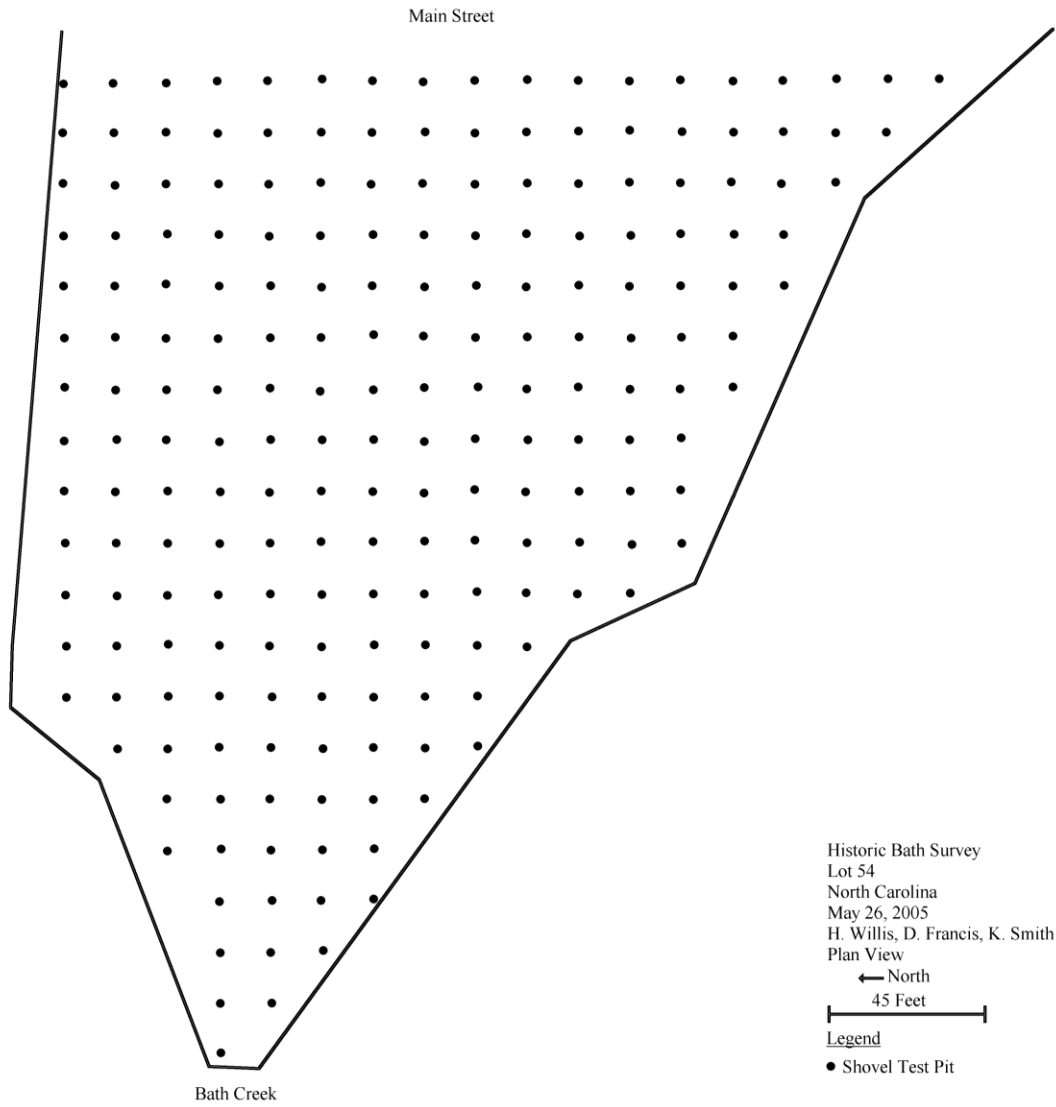

FIGURE 24: 2005 Historic Bath Survey Map of Bonner Point (Willis, et al. 2005).

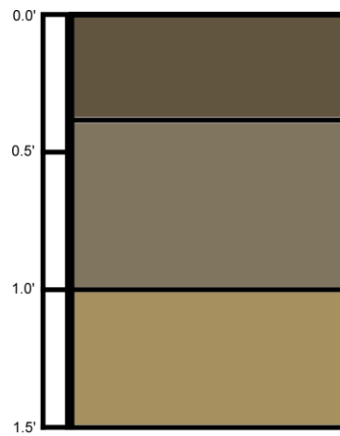

FIGURE 25: 2005 Historic Bath Survey Intern House Lot Typical Stratigraphy.

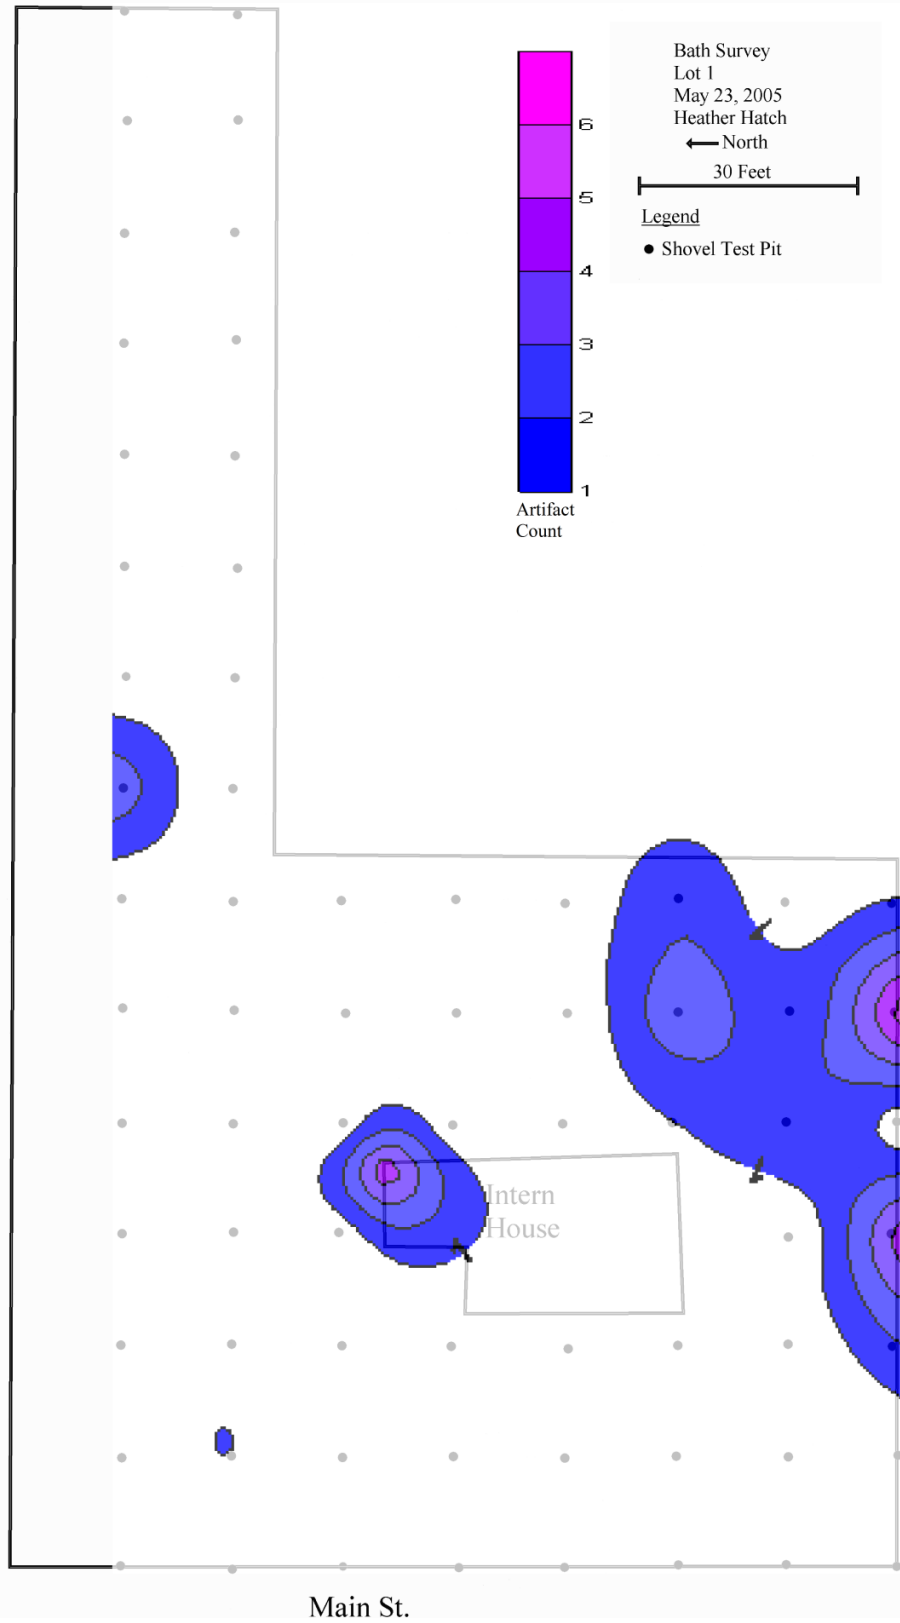

FIGURE 26: Distribution of Early 18th Century Artifacts on the Intern House Lot.

Bonner Point

John Lawson's Last Will and Testament states that there was a wharf on his property that he left to Hannah Smith, which would be on present day Lot 54 or Bonner Point. However, it is important to note that the Bath Survey project did not reveal evidence of the wharf and landing, no doubt because of the rise in sea level since the early eighteenth century. Thus, this investigation will be focused on datable artifacts to determine if there was any activity on Bonner Point during the early eighteenth century.

Stratigraphy

The typical profile of a shovel test pit on Bonner Point had three zones (Figure 27). The bottom of Zone One was at 0.75 feet. The base of Zone Two was at approximately 1.5 feet and the soil color was lighter than that of Zone One. The bottom of Zone Three was at 2.0 feet and was more yellow than either of the previous zones.

Artifacts

There were very few early eighteenth century artifacts throughout Bonner Point, including Unglazed Redware, Staffordshire Slipware, Lead Glazed Coarse Earthenware, and Delftware, with the highest concentrations being in the north and the east (Figure 28).

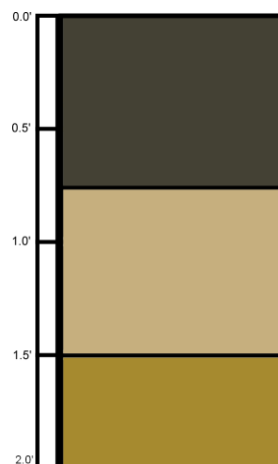

FIGURE 27: 2005 Historic Bath Survey Bonner Point Typical Stratigraphy.

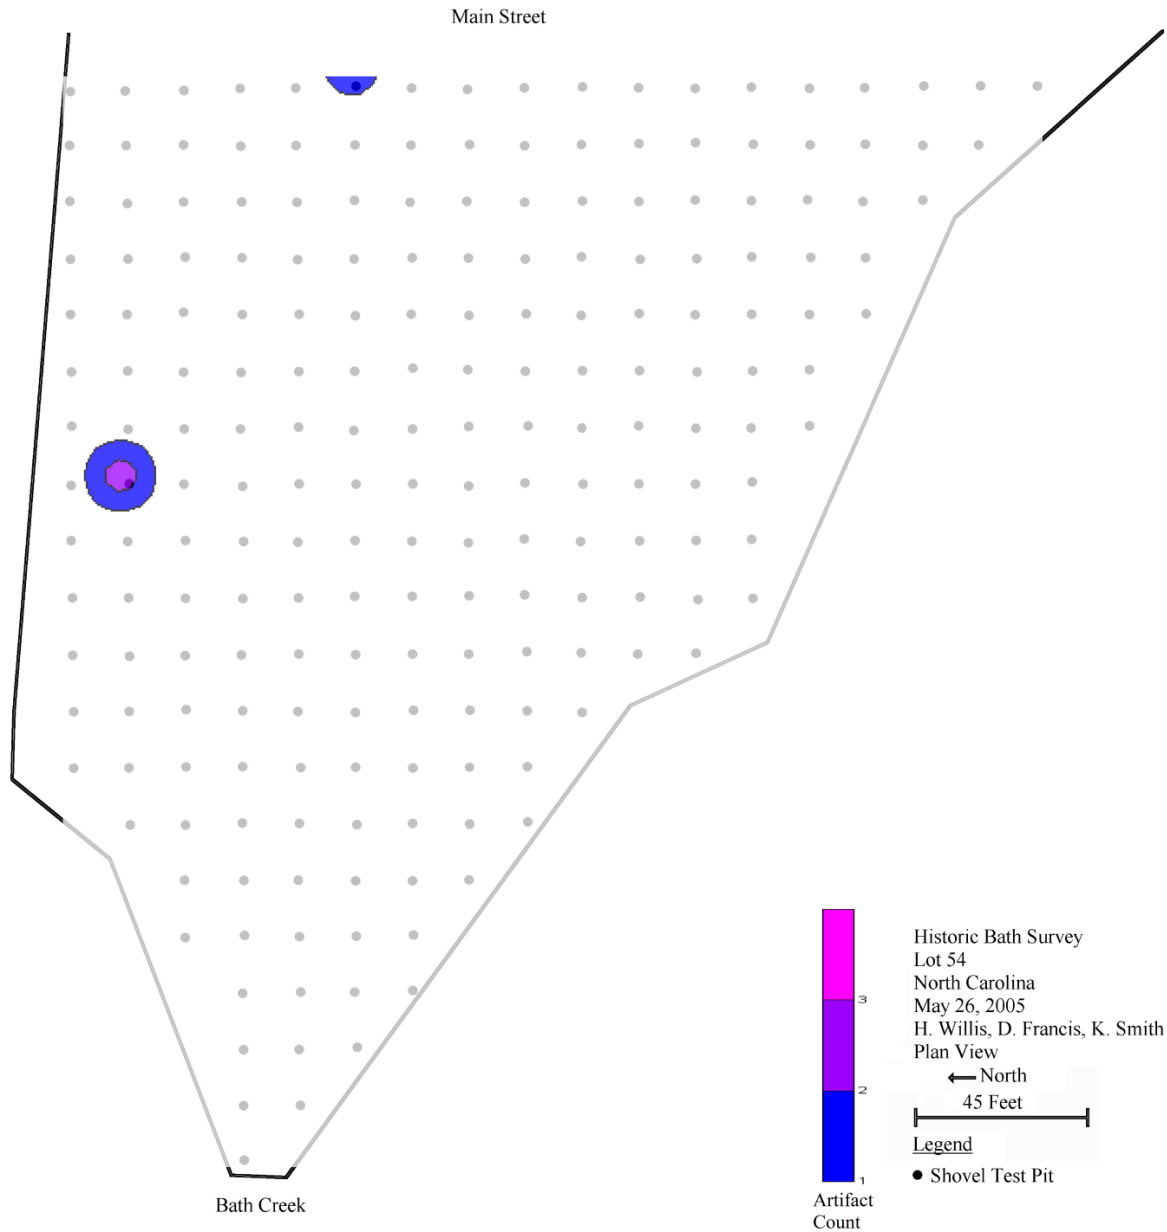

FIGURE 28: Distribution of Early 18th Century Artifacts on Bonner Point.

Summer 2010 Summer Ventures

Excavation

The purpose of the 2010 Summer Ventures program was to investigate the accidental discovery of a buried brick foundation. The previous datum could not be located so a new one was established that was approximately 0.5 feet off of the original datum. This field season

lasted from June 21 to July 9. Two units were excavated during the summer 2010 field season (Figure 29) (McMillan 2010).

Stratigraphy

The base of Zone One was at approximately 0.4 feet and was dark. Zone Two was mottled dark and light soil with brick and the base was at approximately 0.9 feet. Zone Three was light and the base was at approximately 1.75 feet (Figure 30).

Features

Features Two and Three were at the base of Zone Three. These features were postmolds that were possibly associated with the arbors that John Lawson speaks of in his Last Will and Testament (Figure 31).

Artifacts

Both units excavated in 2010 showed evidence of disturbance. Zone One had a date range of the late eighteenth century to the twentieth century (Table 12). Zone Two artifacts showed a date range of the late eighteenth century to the late nineteenth century (Table 13). Zone Three had a date range of the eighteenth century (Table 14).

Survey

This project took place on July 9, 2010 on historic Lot Five and its purpose was to further investigate early eighteenth century artifact concentrations found during the 2003 Historical Archaeology Class Survey. The datum used during the 2010 excavations was used, and shovel tests were placed at 15 foot intervals around the earlier shovel test pits that showed high concentrations of early eighteenth century artifacts (Figure 32). All five shovel tests recorded artifacts.

Stratigraphy

This survey confirmed the stratigraphy of the lot found in previous excavations. Across the lot there were three levels, however these levels ran a tad deeper than those previously excavated. The typical stratigraphy of the 2010 shovel tests had the bottom of Zone One at approximately 1 foot, the bottom of Zone Two at approximately 1.9 feet, and the bottom of Zone Three was at approximately 2.25 feet. Typically the soil colors of Zone One were dark and each successive zone got lighter, with Zone One typically being black, with Zone Two typically being dark brown, and Zone Three being yellowish brown (Figure 33).

Artifacts

Artifacts that could have dated to the early eighteenth century were found throughout the shovel test pits. Again a heavier concentration of early eighteenth century artifacts was found to the north of the Bonner House (Figure 34).

Chapter 5: Interpretations and Conclusions

The historical record suggests that there were three occupations of Lots Five and Six, with the latest and earliest occupations being residential and the middle occupation being primarily commercial. The archaeology also suggests that there were three occupations of Lots Five and Six, with the latest occupation dating from the late eighteenth century to the twentieth century, the middle occupation dating from the late eighteenth century to the middle of the nineteenth century, and the earliest occupation dating to the early eighteenth century.

The latest occupation was a residential occupation that started in 1830 when Joseph Bonner purchased Lots Five and Six and ended in 1960 when the property was purchased by the Beaufort County Historical Society. This occupation ended at this time because once the properties were purchased by the Beaufort County Historical Society, the properties were renovated as an exhibit for Historic Bath. The historic record tells us that the property was a residential property during the Bonner occupation, because not only does the Bonner home place still stand on this property, but the property was also in the Bonner family for 112 years and many Bonner family death certificates state the address of residence and death as being on Main Street in Bath. After the Bonner ownership, the Norman family owned the property until it passed into the hands of the state, and again the death certificate of Joseph Hunter Norman states that the place of residence and death was on Main Street in Bath.

The archaeology dates Zone One to the twentieth century, which with the disturbance from renovations by the Beaufort County Historical Society follows pretty closely with the historical residential occupation. Feature 7 started in Zone One Level Two and continued into Zone Two Level One, where it was joined by Features 5, 13, 15, and 42. These five features were related to the Bonner House attached kitchen, confirming that Zone One was related with

the Bonner occupation. Feature 29 started in Zone One and it covered the ballast stone feature in the north-central Bonner House yard, which indicates that the ballast stone features were not related to the latest residential occupation of the late eighteenth century to the twentieth century.

Feature 29 continued into Zone Two Level One and continued to cover the ballast stone feature in the north-central Bonner House yard, pushing the date of the ballast stone feature further back in history. The builder's trenches associated with the ballast stone features were found in Zone Two Levels Two, Three, and Four. Features 39 and 41 were not completely excavated, but Features 33 and 37 sit on sterile soil with the ballast stone feature in the northwestern Bonner House yard. Two of these builder's trenches did not have any datable artifacts, but the two that had datable artifacts dated to the early eighteenth century. These features date the ballast stone features to the early eighteenth century and the Lawson occupations. The artifacts of Zone Two date this occupation from the late eighteenth century to the middle of the nineteenth century. This occupation was a commercial occupation that started in 1730 when the lots were purchased by the merchants Blackbourne and Crofton and it ended in 1830 when the Lots were purchased by Joseph Bonner. The historical record indicates that this occupation was commercial, with commercial being defined as being used for profit, for many different reasons. First, during this time frame Bath was one of the few port towns in North Carolina, and the properties were at the junction of Bath and Back Creeks, making them very desirable as a commercial property. Second, Blackbourne and Crofton were merchants who made many improvements to the property, including the store house on Lot Six. These improvements aided Crofton in making a profit equivalent to \$91,760.00 in 2008 United States dollars. The profit that Crofton made on the selling of the property also points to Lots Five and Six being a highly valuable commercial property. The store house also suggests a commercial

occupation because it was used to store goods, and possibly to sell goods. This is evidenced by the fact that when the store house was sold separately from the lots, it was always sold with a 10 foot wide parcel of land that led to Front Street.

The first person to purchase the lots with the store house and mansion house was Edward Howcott who was an innkeeper and had a public house in Bath near the ferry in 1745; this suggests that the mansion house on the lots was used as said public house for profit, and again telling us that these lots were commercial property at this time. Howcott then sells the lots to James Calef, another merchant, who in turn sells the lots back to Howcott without the store house; this suggests that the lots were commercial because Calef, the merchant, would need a store house and Howcott, the innkeeper, would need a mansion house to make a profit. The next owner of Lots Five and Six was William Mace, who made his living as a merchant. The next two owners did not live on Lots Five and Six. Parkinson lived in New Bern, and the Palmers lived up the street in the Palmer-Marsh House. These facts support the idea that during this time Lots Five and Six were primarily commercial property. At this point in history Lots Five and Six were no longer sold as a unit. Lot Five was sold to the merchants Hill and Barrow, then to Patrick Rourke, who was also a merchant continuing the commercial occupation. Lot Five then changed hands four times in less than a year and was sold to Walter Hanrahan in 1800 and ended up in the hands of William Carrington in 1805. The short ownership of Hanrahan could mean that it was commercial property, but there is no conclusive evidence. However, Lot Five was then sold to the Carringtons who owned many lots in Bath, which suggests that it was purchased for speculative reasons. The line of title for Lot Six is very broken from the time of its separation from Lot Five until it was purchased by Joseph Bonner in 1830, so it lends us no clues to the type of occupation, until the Bonner occupation.

The earliest occupation was a residential occupation that started in 1705/6 when Lots Five and Six were purchased by John Lawson and ended in 1730 when the lots were purchased by the merchants Blackbourne and Crofton. According to deed records this was a residential occupation because when John Lawson leased land to Hannah Smith he refers to the land as “all his site and Lots of Land whereon he now liveth being within a fence and containing one acre and eight Pole lying on the front street in Bath Town” (BCRD 1706:1.91-92). They were still residential during the ownership of Isabella Lawson. This is evidenced by the January 17, 1715 Act of Assembly stipulating that lot owners were to place a “habitable house” on lots in order to maintain ownership, and as Isabella sold the lots in 1729, she must have complied with the Act or she would have lost the property and could not have sold it (BCRD 1715:1.246-247; BCRD 1729:2.22-23). In this instance the historical documentation and the archaeological evidence are in agreement. The archaeology indicates that this occupation dated to the early eighteenth century, because of the 50 datable ceramics from Zone Three the majority were from the early eighteenth century. The ballast stone feature in the northwestern yard of the Bonner House Lot is at the bottom of Zone Three Level Two and sits on sterile soil, showing that this ballast stone feature dates to the early eighteenth century and the Lawson occupations.

Future Research

Units 59N/42E, 59N/45E, and 63N/45E contained a ballast stone feature, but excavation was suspended before the bottom of this feature was found. Therefore, excavation in these units and in the surrounding area should be continued to better understand the Lawson occupation. Further excavation may also serve to better illustrate the history of Lots Five and Six during Lawson’s time in Bath if the possible fences, buildings, orchards, gardens, wharves, and landings

mentioned in John Lawson's lease of the lot to Hannah Smith can be found (BCRD 1706:1.91-92).

Some new and reopened units may serve to further interpret the history of Lots Five and Six. Unit 55N/15E is very close to the ballast stone feature and had "a lot of stone and brick rubble" (Ewen 2003b:15). Further excavation of this unit, even though it was terminated due to disturbance, might better identify the function of this ballast stone feature (Ewen 2003b:16). It may also be wise to begin excavation on a unit at 65N/15E. There seemed to be evidence of much activity in unit 65N/35E at Zone Two Level Two. Units 50N/20E, 55N/20E, and 63N/45E could be taken down another level to see if there is any sign of occupation predating the late eighteenth century. Units 65N/50E, 70N/50E, and 90N/60E were suspended after only being excavated to Zone One Level Two and Zone Two Level One, respectively, and the other units at this site go as deep as Zone Three Level Two (Fuhrmeister 2004). Therefore, it may be prudent to continue with the excavation of these units as logic tells us that they should go deeper as many artifacts were found at the excavated base of each of these units.

Even though these locations are not near the ballast stone feature, they may help to enlighten us further about the history of Lots Five and Six and the houses associated with them. Units 55N/125E could be taken below Zone Two Level Two. In Shovel Test Pit 90N/30E, students uncovered large brick fragments at approximately one foot below surface, which is approximately where the features pertaining to the Bonner House attached kitchen were found, however no subsequent units were dug in this area. It may also be reasonable to excavate between the location of the store house located on Lot Six and Front Street to try to locate a path between the two. It would also help to explain the history of Lots Five and Six, in the form of further investigation of the postmolds found in Zone Three, if units 108N/25E and 108N/20E

were excavated further and new units were opened in the surrounding area. Further research will help the interpreters in Historic Bath to better understand the site and improve public education.

Summary

John Lawson spent a total of eight years in North Carolina. Mr. Lawson can be placed in Bath on at least 35 different days throughout those eight years, because he was in Bath several times to perform his duties and perform transactions in court. There are also nine deeds registered in Bath County, now Beaufort County, that state that John Lawson lived in Bath Town (Norris 2003 Deeds:125-126, 196-197, 199, 202, 218, 227-228). Lawson's lease of land to Hannah Smith refers to the land as "all his site and Lots of Land whereon he now liveth being within a fence and containing one acre and eight Pole lying on the front street in Bath Town and all houses edifices, buildings, storehouses, orchards, gardens, front land, wharves, landings, easements and commodities" (BCRD 1706:1.91-92). These factors suggest that he did call Bath his home and did sleep in Bath at least from time to time.

The archaeological record shows that three zones are present on Lots Five and Six. Zone One dates from the late eighteenth century to the twentieth century, Zone Two dates from the late eighteenth century to the middle of the nineteenth century, and Zone Three dates to the early eighteenth century and the Lawson occupations. The ballast stone feature in the northwestern yard and presumably its mate in the north-central yard are located at the bottom of Zone Three. The builder's trenches for the ballast stone features date to the early eighteenth century and the time of the Lawson occupations.

Looking at the textual evidence, in which John Lawson himself says that he lives on his lots in Bath and court records indicate that he was in Bath for days at a time, and taking into

account the archaeological evidence that Zone Three dates to the early eighteenth century and the bases of the ballast stone features are located at the base of Zone Three, it is logical to conclude that the ballast stone features on historic Lots Five and Six are chimney foundations associated with the structure that was once occupied by John Lawson and/or his daughter, Isabella.

1648-113	2	Architecture	Fragment	Iron	Unidentified							Corroded

2005 Historic Bath Survey												
ACC-FS #	Artifact Count	Group	Class	Material	Type	Variety	Color	Element	Decoration	Weight in Grams	Dimensions	Remarks
1648-113	1	Kitchen	Fragment	Ceramic	Pearlware		Purple		Transfer Printed			
1648-113	1	?	Fragment	Plastic			Red					
1648-113	7	Architecture	Brick	Coarse Earthenware			Red			3.7 g		
1648-113	1		Lithic	Lithic								
1648-114	75+	Architecture	Brick	Coarse Earthenware			Red			56.6 g		
1648-114	5+	Architecture	Fragment	Iron	Unidentified							Corroded
1648-114	1	Kitchen	Fragment	Glass	Curved		Amber					Bottle
1648-114	1	Kitchen	Fragment	Glass	Curved		Clear					Bottle
1648-114	1	Architecture	Fragment	Glass	Flat		Aqua					
1648-114	1	Architecture	Fragment	Glass	Flat		Green					
1648-114	1	?	Fragment	Plastic			Polychrome					
1648-114	1	?	Fragment	Plastic	Sheet Fragment		Clear					
1648-114	1	Kitchen	Fragment	Ceramic	Pearlware		Brown		Hand Painted, Polychrome (Early)			Brown flower Painted on it
1648-114	2	Kitchen	Fragment	Ceramic	Salt-Glazed Stoneware		White					
1648-115	25+	Architecture	Brick	Coarse Earthenware			Red			851.5 g		
1648-115	1	Biological	Shell	Shell								
1648-115	1	Architecture	Nail	Iron	Unidentified							Corroded
1648-115	5+	Architecture	Mortar	Mortar			White			39.5 g		
1648-115	1	?	Fragment	Plastic			Purple					
1648-115	3	Kitchen	Fragment	Glass	Curved		Clear		Scalloped Rim on 1 Fragment			
1648-115	1	Architecture	Fragment	Glass	Flat		Aqua					Window
1648-115	1	Kitchen	Fragment	Glass	Curved		Clear					Foggy - Burnt
1648-116	10+	Architecture	Brick	Coarse Earthenware			Orange			119 g		
1648-116	1	Architecture	Nail	Iron	Unidentified							Corroded
1648-116	5	Architecture	Fragment	Iron	Unidentified							Corroded
1648-116	1	Architecture	Fragment	Glass	Flat		Clear					Window
1648-116	1	Kitchen	Fragment	Ceramic	Unidentified Coarse Earthenware		Polychrome					
1648-116	1	Kitchen	Fragment	Ceramic	Unidentified Coarse Earthenware		Brown	Rim	Glaze looks sponged or spattered			
1648-117	1	Architecture	Brick	Coarse Earthenware			Orange			1.7 g		
1648-117	2	Kitchen	Fragment	Glass	Curved		Amethyst					Solarized
1648-117	1	Kitchen	Fragment	Glass	Curved		Clear					Window
1648-117	6	Architecture	Fragment	Iron	Flat		Clear					Corroded
1648-117	10+	Architecture	Nail	Iron	Unidentified							Corroded
1648-117	1	Kitchen	Fragment	Ceramic	Staffordshire slipware		Polychrome					
1648-118	15	Architecture	Fragment	Fossilized Shell/Concrete								Commonly used in utility trenches
1648-118	2	Architecture	Brick	Coarse Earthenware			Orange			3.4 g		
1648-118	2	Architecture	Brick	Coarse Earthenware			Black			10.2 g		Burnt Brick
1648-118	1	Kitchen	Wrapper	Plastic			White					
1648-118	1	Architecture	Fragment	Iron	Unidentified							Corroded
1648-118	1	Kitchen	Fragment	Glass	Curved		Light Emerald Green					Bottle
1648-119	1	?	License Plate	Metal	License Plate		Blue and Yellow					NC Plate # c-1756 (?) NC Dept. of Con. + Dev.
1648-119	10+	Architecture	Brick	Coarse Earthenware			Orange			21.4 g		
1648-119	1	Architecture	Fragment	Copper	Wire							
1648-119	2	Architecture	Fragment	Fossilized Shell/Concrete								Commonly used in utility trenches
1648-119	2	Biological	Shell	Shell								
1648-119	3	?	Fragment	Plastic	Unidentified							
1648-119	1	Kitchen	Fragment	Aluminum	Unidentified							
1648-119	2	Kitchen	Fragment	Glass	Curved		Emerald Green					
1648-119	2	Architecture	Fragment	Glass	Flat		Aqua					Window
1648-119	2	Architecture	Fragment	Glass	Flat		Olive Green					Window
1648-119	1	Kitchen	Fragment	Glass	Curved		Clear					Burnt Bottle

2005 Historic Bath Survey												
ACC-FS #	Artifact Count	Group	Class	Material	Type	Variety	Color	Element	Decoration	Weight in Grams	Dimensions	Remarks
1648-119	48	Kitchen	Fragment	Glass	Curved		Clear					Many appear to be from same vessel Bottle
1648-119	3	Biological	Faunal	Bone	Unidentified							
1648-119	3	?	Fragment	Metal (lead?)	Unidentified							
1648-119	4	?	Fragment	Plastic	Unidentified		Polychrome					
1648-119	1	?	Fragment	Metal	Unidentified							looks like a jack (children's game Piece)
1648-119	3	?	Fragment	Unidentified	Unidentified							
1648-119	100+	Architecture	Nail	Iron	Unidentified							Corroded
1648-119	2	Architecture	Fragment	Unidentified (plaster?)	Unidentified							
1648-119	25		Charcoal	Charcoal			Black					
1648-119	1	Kitchen	Fragment	Ceramic	Whiteware		White	Rim	Gold Gilded Over Glaze			Gold flowers
1648-119	1	Kitchen	Fragment	Ceramic	Whiteware		White	Foot Ring	Gold Gilded Over Glaze			
1648-119	1	Kitchen	Fragment	Ceramic	Whiteware		White		Gold Gilded Over Glaze			
1648-119	4	Kitchen	Fragment	Ceramic	Unidentified Porcelain		White					likely a modern European type
1648-119	1	Kitchen	Fragment	Ceramic	Unidentified Porcelain		White	Foot Ring				likely a modern European type
1648-119	1	Kitchen	Fragment	Ceramic	Pearlware		Polychrome		Banded Annular Ware			
1648-119	3	Architecture	Object and Screws	Metal	Unidentified							Corroded
1648-120	10	Kitchen	Fragment	Glass	Curved		Clear					
1648-120	1	Architecture	Fragment	Glass	Flat		Aqua					
1648-120	13	Architecture	Fragment	Mortar			Gray			98.4 g		
1648-120	9	Architecture	Fragment	Fossilized Shell/Concrete			Gray			98.2 g		Commonly used in utility trenches
1648-120	20	Architecture	Brick	Coarse Earthenware			Orange			119.4 g		
1648-120	15+	Biological	Shell	Shell								
1648-120	20+	Architecture	Nail	Iron	Unidentified							Corroded
1648-120	1	?	Fragment	Plastic	Unidentified		White					
1648-120	1	Clothing	Button	Unidentified (cork?)	Unidentified		White					
1648-120	1	?		Metal (lead?)	Unidentified							Object
1648-121	1	Kitchen	Fragment	Glass	Curved		Blue					
1648-121	4	Architecture	Brick	Coarse Earthenware			Orange			29.7 g		
1648-121	2	Architecture	Nail	Iron	Cut							Corroded
1648-121	1	Architecture	Nail	Iron	Wire							Corroded
1648-121	10+	Architecture	Fragment	Iron	Unidentified							Corroded
1648-121	50+	Architecture	Mortar	Mortar			Gray			158.8 g		
1648-122	6	Architecture	Brick	Coarse Earthenware			Orange			2.3 g		
1648-122	1	Activities	Bead	Glass	Unidentified		Light Blue					
1648-122	1	?	Fragment	Lead								
1648-122	1	?	Fragment	Metal	Unidentified							Maybe the top of a shotgun Shell
1648-122	2	Architecture	Fragment	Glass	Flat		Aqua					Window
1648-122	1	Kitchen	Fragment	Glass	Curved		Amethyst					Solarized
1648-122	1	Architecture	Fragment	Glass	Flat		Clear					Window
1648-122	1	Kitchen	Fragment	Glass	Curved		Clear					
1648-122	5	Architecture	Nail	Iron	Unidentified							Corroded
1648-122	2	Architecture	Nail	Iron	Cut							Corroded
1648-122	2	Architecture	Nail	Iron	Wire							Corroded
1648-122	20+	Architecture	Fragment	Iron	Unidentified							Corroded
1648-122	1	Kitchen	Fragment	Ceramic	Pearlware		Blue	Rim	Edged			
1648-122	1	Kitchen	Fragment	Ceramic	Unidentified Refined Earthenware		White					
1648-123	30+	Architecture	Fragment	Iron	Unidentified							Corroded
1648-123	1	Biological	Shell	Shell								

2005 Historic Bath Survey												
ACC-FS #	Artifact Count	Group	Class	Material	Type	Variety	Color	Element	Decoration	Weight in Grams	Dimensions	Remarks
1648-123	1		Charcoal	Charcoal			Black			1.3 g		
1648-123	4	Kitchen	Fragment	Glass	Curved		Amber					Bottle
1648-123	3	Kitchen	Fragment	Glass	Curved		Aqua					
1648-123	1	Architecture	Fragment	Glass	Flat		Aqua					Window
1648-123	2	Kitchen	Fragment	Glass	Curved		Amethyst					Solarized
1648-123	75+	Architecture	Brick	Coarse Earthenware			Orange			221.0 g		
1648-123	1	Kitchen	Fragment	Ceramic	Brown Lead Glazed Redware		Brown					
1648-123	3	Kitchen	Fragment	Ceramic	Unidentified Refined Earthenware		White					
1648-123	1	Kitchen	Fragment	Ceramic	Unidentified Refined Earthenware		White	Rim				
1648-124	5	Architecture	Brick	Coarse Earthenware			Orange			1.9 g		
1648-124	5		Charcoal	Charcoal			Black			11.8 g		
1648-124	25+	Architecture	Fragment	Fossilized Shell/Concrete						110.5 g		Commonly used in utility trenches
1648-124	2	Kitchen	Fragment	Plastic	Bottle Cap Fragment							
1648-125	25+	Architecture	Brick	Coarse Earthenware			Orange			27.9 g		
1648-125	1	Architecture	Fragment	Glass	Flat		Aqua					Window
1648-125	3	Biological	Shell	Shell								
1648-125	1	Biological	Faunal	Bone	Unidentified							
1648-125	1	Activities	Fragment	Glass	Bead Fragment		White					
1648-125	6	Kitchen	Fragment	Ceramic	Bisque		Orange Paste					No Glaze
1648-125	1	Kitchen	Fragment	Ceramic	Brown Lead Glazed Redware		Brown					
1648-125	3		Charcoal	Charcoal						1.2 g		
1648-125	1	Architecture	Nail	Iron	Wire							Corroded
1648-125	3	Architecture	Nail	Iron	Cut							Corroded
1648-125	3	Architecture	Nail	Iron	Unidentified							Corroded
1648-125	1	Architecture	Fragment	Iron	Unidentified							Corroded
1648-125	1	?	Fragment	Lead	Unidentified							Corroded with White dust on it
1648-126	6	Architecture	Mortar	Mortar			White			27.3 g		
1648-126	6	Architecture	Brick	Coarse Earthenware			Orange			23.1 g		
1648-126	1	Architecture	Fragment	Fossilized Shell/Concrete						10.9 g		Commonly used in utility trenches
1648-126	1	Biological	Shell	Shell								
1648-126	1	Architecture	Fragment	Glass	Flat		Aqua					Window
1648-126	2	Architecture	Nail	Iron	Cut							Corroded
1648-126	5	Architecture	Fragment	Iron	Unidentified							Corroded
1648-127	11	Architecture	Fragment	Fossilized Shell/Concrete						145.6 g		
1648-127	3	Architecture	Nail	Iron	Cut							Corroded
1648-127	7	Architecture	Nail	Iron	Unidentified							
1648-127	10+	Architecture	Fragment	Iron	Unidentified							Corroded
1648-127	1	Architecture	Fragment	Glass	Flat		Aqua					Window
1648-127	1	Kitchen	Fragment	Glass	Curved		Clear					Bottle
1648-127	5	Architecture	Brick	Coarse Earthenware			Orange			5.3 g		
1648-127	15	Kitchen	Fragment	Ceramic	Coarse Earthenware Pipe		Red			3.24 lbs (1470 g)		Portions of a large pipe, possibly for water/sewer
1648-128	7	Architecture	Fragment	Fossilized Shell/Concrete						184.6 g		
1648-128	1		Charcoal	Charcoal								
1648-128	1	?	Fragment	Rubber	Unidentified		Black					
1648-128	1	?	Fragment	Lead	Unidentified							
1648-128	7	Architecture	Brick	Coarse Earthenware			Orange			17.9 g		
1648-128	1	Biological	Shell	Shell								
1648-128	3	?	Fragment	Aluminum	Unidentified							
1648-128	1	Kitchen	Fragment	Glass	Curved		Clear					Melted / Burnt Medicine Bottle
1648-128	9	Kitchen	Fragment	Glass	Curved		Clear					Bottle
1648-128	1	Kitchen	Fragment	Glass	Slightly Curved		Yellowish Olive Green					

2005 Historic Bath Survey												
ACC-FS #	Artifact Count	Group	Class	Material	Type	Variety	Color	Element	Decoration	Weight in Grams	Dimensions	Remarks
1648-128	1	Architecture	Fragment	Glass	Flat		Clear					Window
1648-128	2	Kitchen	Fragment	Ceramic	Lead Glazed Redware		Brown		Sliptrailed			Slip Design eroded away with Brown glaze still on
1648-128	3	Kitchen	Fragment	Ceramic	Whiteware		White					
1648-128	1	Kitchen	Fragment	Ceramic	Whiteware		White	Rim	Scalloped Rim			
1648-128	1	Kitchen	Fragment	Ceramic	Whiteware		White	Rim	Feathered Rim			
1648-128	20+	Architecture	Fragment	Iron	Unidentified							Corroded
1648-128	2	Architecture	Nail	Iron	Wire							Corroded
1648-128	4	Architecture	Nail	Iron	Cut							Corroded
1648-128	13	Architecture	Nail	Iron	Unidentified							Corroded
1648-128	1	Architecture	Nail	Metal	Cut							Maybe Lead
1648-129	4	Architecture	Brick	Coarse Earthenware			Orange			14.9 g		
1648-129	1		Lithic	Lithic								Water worn cobble
1648-129	9		Charcoal	Charcoal								
1648-129	5	Biological	Shell	Shell								
1648-129	1	Architecture	Fragment	Glass	Flat		Clear					Window
1648-129	2	Kitchen	Fragment	Glass	Curved		Clear					Bottle
1648-129	2	?	Fragment	Plastic			Brown and White					
1648-129	2	Kitchen	Fragment	Ceramic	Unidentified Refined Earthenware		White					
1648-129	2	?	Fragment	Metal (copper or Tin?)	Bale Seal Fragment							Connect. One Fragment has man's head, other has woman's
1648-129	1		Lithic	Lithic								Maybe petrified wood, porous but not Bone
1648-129	3	Architecture	Nail	Iron	Cut							Corroded
1648-129	8	Architecture	Nail	Iron	Unidentified							Corroded
1648-129	30+	Architecture	Fragment	Iron	Unidentified							Corroded
1648-130	5	Architecture	Brick	Coarse Earthenware			Orange			27.2 g		
1648-130	5	Kitchen	Fragment	Glass	Curved		Red					
1648-130	1	Kitchen	Fragment	Glass	Curved		White		Milk Glass			
1648-130	1	Kitchen	Fragment	Glass	Curved		Emerald Green		Relief Design (Flowers and Dots)			
1648-130	2	Architecture	Fragment	Glass	Flat		Aqua					Window
1648-130	1	Kitchen	Fragment	Glass	Curved		Clear					Bottle
1648-130	1	Kitchen	Fragment	Glass	Curved		Green/Brown					Melted / Burnt
1648-130	1	Biological	Faunal	Bone								
1648-130	3	Biological	Shell	Shell								
1648-130	15		Charcoal	Charcoal								
1648-130	1	Clothing	Zipper pull	Metal	Zipper pull							
1648-130	1	Kitchen	Fragment	Ceramic	Brown Lead Glazed Redware		Brown	Rim				
1648-130	1	Clothing	Fragment	Metal	Fastener				says "Union Made"			Corroded Probably an overall fastener, maybe Union Fabric Co.
1648-130	1	?	Object	Iron	Unidentified							Corroded
1648-130	25	Architecture	Nail	Iron	Unidentified							Corroded
1648-130	6	Architecture	Nail	Iron	Cut							Corroded
1648-130	3	Architecture	Nail	Iron	Wire							Corroded
1648-130	1	?	Spring	Metal								Corroded
1648-130	50+	Architecture	Fragment	Iron	Unidentified							Corroded
1648-131	49	Architecture	Fragment	Glass	Flat		Aqua					Window
1648-131	1	Kitchen	Fragment	Glass	Curved		Light Olive Green					
1648-131	1	Kitchen	Fragment	Glass	Curved		White		Milk Glass			
1648-131	1	Kitchen	Fragment	Glass	Curved							Melted / Burnt
1648-131	2	Kitchen	Fragment	Glass	Curved		Clear					Bottle

2005 Historic Bath Survey												
ACC-FS #	Artifact Count	Group	Class	Material	Type	Variety	Color	Element	Decoration	Weight in Grams	Dimensions	Remarks
1648-131	1	Kitchen	Fragment	Glass	Curved		Amethyst					Solarized Bottle
1648-131	3	Kitchen	Fragment	Glass	Curved		Aqua					Foggy
1648-131	2	Architecture	Fragment	Glass	Flat		Aqua					thin and Foggy Window
1648-131	1	Kitchen	Fragment	Glass	Curved		Clear					
1648-131	4		Lithic	Lithic								
1648-131	2	Architecture	Mortar	Mortar			Gray			16.7 g		
1648-131	2	Biological	Shell	Shell								
1648-131	1	Architecture	Object	Iron	Unidentified							Corroded circular object
1648-131	10+	Architecture	Brick	Coarse Earthenware			Orange			59.0 g		
1648-131	25	Architecture	Nail	Iron	Unidentified							Corroded
1648-131	2	Architecture	Nail	Iron	Cut							Corroded
1648-131	30+	Architecture	Fragment	Iron	Unidentified							Corroded
1648-131	1	Kitchen	Fragment	Ceramic	Whiteware		White	Rim				Burnt
1648-131	1	Kitchen	Fragment	Ceramic	Creamware		White	Rim	Feathered Rim			
1648-131	1	Kitchen	Fragment	Ceramic	Pearlware		Bluish White	Foot Ring	Plain			
1648-131	1	Kitchen	Fragment	Ceramic	Unidentified Refined Earthenware		Cream / White					
1648-131	2	Kitchen	Fragment	Ceramic	Pearlware		White					
1648-131	1	Kitchen	Fragment	Ceramic	Unidentified Porcelain		White	Rim	Plain			Maybe Modern?
1648-131	1	Kitchen	Fragment	Ceramic	Brown Lead Glazed Redware			Handle				General Utilitarian Lead Glazed Earthenware
1648-131	1	Kitchen	Fragment	Ceramic	Annular Ware		White and Blue		Banded			
1648-131	1	Kitchen	Fragment	Ceramic	Unidentified Porcelain		White					looks like a porcelain doll Fragment
1648-132	1	Biological	Faunal	Bone	Unidentified							
1648-132	5		Fragment	Coal						4.1 g		
1648-132	10+	Architecture	Fragment	Iron	Unidentified							Corroded
1648-132	4		Lithic	Lithic								
1648-133	12	Architecture	Brick	Coarse Earthenware			Orange			23.7 g		
1648-133	1		Lithic	Lithic								
1648-133	4		Charcoal	Charcoal						0.6 g		
1648-133	1	Architecture	Fragment	Shingle								
1648-133	5	Architecture	Fragment	Glass	Flat		Polychrome					Window
1648-133	2	Kitchen	Fragment	Glass	Slightly Curved		Clear					
1648-133	2	Kitchen	Fragment	Glass	Slightly Curved		Aqua					
1648-133	2	Kitchen	Fragment	Glass	Curved		Clear					Bottle
1648-133	1	Kitchen	Fragment	Glass	Curved		Clear					Bottle molded lettering = "L"
1648-133	1	Kitchen	Fragment	Ceramic	Bisque		Orange Paste					
1648-133	1	Kitchen	Fragment	Ceramic	Unidentified Porcelain		White	Rim	Rim Incised with Swirl Design			Design resembles question mark without dot
1648-133	1	Kitchen	Fragment	Ceramic	Unidentified Porcelain		White					
1648-133	3	Architecture	Chain links	Iron	Unidentified							Corroded three connected links
1648-133	5	Architecture	Nail	Iron	Unidentified							Corroded
1648-133	20+	Architecture	Fragment	Iron	Unidentified							Corroded
1648-134	11	Architecture	Brick	Coarse Earthenware			Orange			23.2 g		
1648-134	3	Architecture	Fragment	Fossilized Shell/Concrete						17.2 g		Commonly used in utility trenches
1648-134	2	Kitchen	Fragment	Glass	Curved		Clear					Bottle
1648-134	1	Biological	Shell	Shell								
1648-134	1		Lithic	Lithic								
1648-134	1	Architecture	Nail	Iron	Unidentified							Corroded
1648-134	7	Architecture	Fragment	Iron	Unidentified							Corroded
1648-134	1	Kitchen	Fragment	Ceramic	Pearlware		White	Rim	Slightly Scalloped Rim			

2005 Historic Bath Survey												
ACC-FS #	Artifact Count	Group	Class	Material	Type	Variety	Color	Element	Decoration	Weight in Grams	Dimensions	Remarks
1648-135	4	Architecture	Brick	Coarse Earthenware			Orange			7.6 g		
1648-135	5	Architecture	Fragment	Fossilized Shell/Concrete						6.6 g		Commonly used in utility trenches
1648-135	1		Lithic	Lithic								
1648-135	2	Architecture	Fragment	Glass	Flat		Clear					Window
1648-135	1	Kitchen	Fragment	Glass	Curved		Clear					Bottle
1648-135	5	Architecture	Fragment	Iron	Unidentified							Corroded
1648-135	1	Architecture	Nail	Iron	Unidentified							Corroded
1648-135	1		Charcoal	Charcoal						0.1 g		
1648-136	7	Architecture	Brick	Coarse Earthenware			Orange			4.5 g		
1648-136	4	Architecture	Fragment	Fossilized Shell/Concrete						41.7 g		Commonly used in utility trenches
1648-136	1	Biological	Shell	Shell								
1648-136	1	Biological	Faunal	Tooth	Shark							Probably imported in with fossilized Lithic and concrete
1648-136	2	Architecture	Mortar	Mortar			Gray			2.9 g		
1648-136	2	Architecture	Fragment	Iron	Unidentified							Corroded
1648-136	1	Kitchen	Fragment	Glass	Curved		Clear					Bottle
1648-137	2	Architecture	Brick	Coarse Earthenware			Orange			0.4 g		
1648-137	1	Kitchen	Fragment	Glass	Curved		Clear					Bottle
1648-137	3	Biological	Shell	Shell								
1648-137	2	Architecture	Fragment	Fossilized Shell/Concrete						6.4 g		Commonly used in utility trenches
1648-137	4	Architecture	Fragment	Iron	Unidentified							Corroded
1648-138	30+	Biological	Shell	Shell						130.6 g		appears to be fossilized Shell
1648-138	1	Biological	Faunal	Bone								
1648-138	1	Architecture	Fragment	Glass	Flat		Aqua					Window
1648-138	5	Architecture	Fragment	Iron	Unidentified							Corroded
1648-138	1	Kitchen	Fragment	Ceramic	Pearlware		White					
1648-139	1	Architecture	Fragment	Glass	Flat		Clear					Window
1648-139	6	Kitchen	Fragment	Glass	Curved		Clear					Bottle
1648-139	2	Kitchen	Fragment	Glass	Curved		Amethyst					Solarized Bottle
1648-139	1	Architecture	Fragment	Fossilized Shell/Concrete						5.8 g		Commonly used in utility trenches
1648-139	3	Architecture	Fragment	Concrete						34.2 g		smooth surface, maybe modern
1648-139	2	Architecture	Brick	Coarse Earthenware			Orange			12.1 g		
1648-139	1	Kitchen	Fragment	Ceramic	Bisque		Orange Paste					
1648-139	1	Kitchen	Fragment	Ceramic	Pearlware		White					
1648-140	5	Architecture	Brick	Coarse Earthenware			Red and Orange			4.7 g		
1648-140	1	Kitchen	Fragment	Ceramic	Unidentified Refined Earthenware		White					
1648-140	1	Kitchen	Fragment	Ceramic	Annular Ware		Polychrome		Mocha			Probably Creamware
1648-140	1	Kitchen	Fragment	Glass	Curved		Amber					Bottle
1648-140	1	Architecture	Fragment	Glass	Flat		Clear					Window
1648-140	2	Kitchen	Fragment	Glass	Curved		Clear					Bottle
1648-140	7	Architecture	Fragment	Fossilized Shell/Concrete						10.2 g		Commonly used in utility trenches
1648-140	5	Kitchen	Fragment	Plastic			Light Green					Threaded, like interior of Bottle cap
1648-140	4	Architecture	Mortar	Mortar			Gray			1.8 g		
1648-140	7	Architecture	Fragment	Iron	Unidentified							Corroded
1648-141	6	Architecture	Fragment	Fossilized Shell/Concrete						55.8 g		Commonly used in utility trenches
1648-141	1	Biological	Shell	Shell								
1648-141	2	Architecture	Mortar	Mortar			Gray			2.6 g		

2005 Historic Bath Survey												
ACC-FS #	Artifact Count	Group	Class	Material	Type	Variety	Color	Element	Decoration	Weight in Grams	Dimensions	Remarks
1648-141	1	?	Fragment	Plastic	Label		Clear					
1648-141	2	Architecture	Nail	Iron	Unidentified							Corroded
1648-141	7	Architecture	Fragment	Iron	Unidentified							Corroded
1648-141	1	Kitchen	Fragment	Glass	Curved		Amethyst					Solarized Bottle
1648-141	1	Architecture	Fragment	Glass	Flat		Clear					Window
1648-141	11	Architecture	Brick	Coarse Earthenware			Orange			9.3 g		
1648-141	1	Kitchen	Fragment	Ceramic	Pearlware		White	Foot Ring	Plain			
1648-141	1	Kitchen	Fragment	Ceramic	Staffordshire Slipware		Polychrome					looks like combed slip Decoration
1648-142	4	Architecture	Brick	Coarse Earthenware			Orange			1.1 g		
1648-142	1	Kitchen	Fragment	Glass	Curved		Aqua					Bottle
1648-142	3	Architecture	Fragment	Fossilized Shell/Concrete						12.6 g		Commonly used in utility trenches
1648-142	6	Architecture	Nail	Iron	Unidentified							Corroded
1648-142	10	Architecture	Fragment	Iron	Unidentified							Corroded
1648-142	1	Arms	Bullet Casing	Copper	Rimmed .22 casing				diamond on bottom			
1648-142	1		Lithic	Lithic								
1648-142	1	Tobacco Pipe	Pipe	Kaolin								Small Fragment, appears to be Incised
1648-142	1	Kitchen	Fragment	Ceramic	Unidentified Porcelain		White					Glossy clear Glaze, possibly part of doll
1648-142	1	Kitchen	Fragment	Ceramic	Unidentified Refined Earthenware		White					
1648-143	12	Architecture	Fragment	Fossilized Shell/Concrete						195.8 g		Commonly used in utility trenches
1648-143	4	Architecture	Brick	Coarse Earthenware			Orange			64.1 g		
1648-143	5	Biological	Shell	Shell								
1648-143	1		Lithic	Lithic								
1648-143	1	Kitchen	Fragment	Glass	Curved		Clear					Bottle Rim
1648-143	2	Kitchen	Fragment	Glass	Slightly Curved		White		Milk Glass			
1648-143	2	Kitchen	Fragment	Glass	Curved		Clear					
1648-143	1	Kitchen	Fragment	Glass	Slightly Curved		Clear					very thick
1648-143	1		Lithic	Lithic								
1648-143	1	Activities	Doll Arm	Ceramic	Unidentified Porcelain		White					
1648-143	5	Architecture	Nail	Iron	Unidentified							Corroded
1648-143	20+	Architecture	Fragment	Iron	Unidentified							Corroded
1648-144	29	Architecture	Fragment	Fossilized Shell/Concrete						1.17 lbs (530.6 g)		Commonly used in utility trenches
1648-144	1	Kitchen	Fragment	Glass	Curved		Amethyst					Solarized Bottle
1648-144	2	Kitchen	Fragment	Glass	Curved		Clear					Bottle
1648-144	1	Kitchen	Fragment	Glass	Curved		Clear					Shattered Bottle Rim
1648-144	10	Architecture	Brick	Coarse Earthenware			Orange			22.9 g		
1648-144	1	Kitchen	Fragment	Ceramic	Unidentified Refined Earthenware		White					Burnt
1648-144	1	Kitchen	Fragment	Ceramic	Unidentified Coarse Earthenware		Brown	Foot Ring	Bristol Slipped			Foot ring or stand of some sort on bottom. Exterior unglazed
1648-144	6	Architecture	Nail	Iron	Unidentified							Corroded
1648-144	10+	Architecture	Fragment	Iron	Unidentified							Corroded
1648-144	1	Architecture	Nail	Iron	Cut							Corroded
1648-144	1	?	Object	Iron	Unidentified							Corroded Square shaped and open in middle
1648-145	3	Architecture	Nail	Iron	Wire							Corroded
1648-145	8	Architecture	Nail	Iron	Unidentified							Corroded
1648-145	15+	Architecture	Fragment	Iron	Unidentified							Corroded
1648-145	8	Architecture	Brick	Coarse Earthenware			Orange			24.0 g		
1648-145	10	Biological	Shell	Shell								
1648-145	7	Architecture	Mortar	Mortar			Gray			22.1 g		

2005 Historic Bath Survey												
ACC-FS #	Artifact Count	Group	Class	Material	Type	Variety	Color	Element	Decoration	Weight in Grams	Dimensions	Remarks
1648-145	17	Kitchen	Fragment	Glass	Curved		Amber					Bottle
1648-145	1	Kitchen	Fragment	Glass	Curved		Amber					Burnt / Melted Bottle
1648-145	2	Architecture	Fragment	Glass	Flat		Clear					Foggy Window
1648-145	1	Kitchen	Fragment	Glass	Curved		Olive Green					Foggy Bottle
1648-145	1	Kitchen	Fragment	Glass	Slightly Curved		Clear					
1648-145	1	Kitchen	Fragment	Glass	Curved		Clear		Lettering			Bottle Looks like the lettering says "NN"
1648-145	1	Kitchen	Fragment	Glass	Curved		Amethyst					Solarized Bottle
1648-145	3	Kitchen	Fragment	Ceramic	Unidentified Porcelain		White					
1648-145	1	Kitchen	Fragment	Ceramic	Lead Glazed Coarse Earthenware		Black					Holes in Fragment, maybe colander. Probably from 1700-1800.
1648-145	1	Kitchen	Fragment	Ceramic	Porcelain		White		Chinese Export Overglazed Floral Leaves			
1648-145	1	Kitchen	Fragment	Ceramic	Delftware		Light Blue					Most of the Tin Enameled Glaze has fallen off
1648-145	1	Kitchen	Fragment	Ceramic	Whieldon Ware		Brown		Spattered Design			
1648-146	8	Architecture	Fragment	Fossilized Shell/Concrete						68.7 g		Commonly used in utility trenches
1648-146	7	Biological	Shell	Shell								
1648-146	1	Architecture	Nail	Iron	Wire							Corroded
1648-146	4	Architecture	Nail	Iron	Unidentified							Corroded
1648-146	25+	Architecture	Fragment	Iron	Unidentified							Corroded
1648-146	13	Architecture	Brick	Coarse Earthenware			Orange			49.2 g		
1648-146	2	Kitchen	Fragment	Glass	Curved		Clear					Ribbed Design, like wavy ripples
1648-146	1	Kitchen	Fragment	Glass	Curved		Clear					Bottle
1648-146	1	Kitchen	Fragment	Glass	Curved		Clear					looks fractured, shattered
1648-146	2		Lithic	Lithic	Shale/Slate							
1648-146	2	Kitchen	Fragment	Ceramic	Unidentified Refined Earthenware		White	Rim				Refit together
1648-146	1	Kitchen	Fragment	Ceramic	Pearlware		White					
1648-155	1	Kitchen	Fragment	Ceramic	Whiteware		Polychrome		Hand Painted (Floral)			
1648-155	2	Kitchen	Fragment	Glass	Curved		Clear					
1648-155	1	?	Fragment	Glass	Unidentified		Clear					Small broken Fragment, not sure if flat or Curved
1648-155	1	Kitchen	Fragment	Glass	Curved		Clear					Foggy, possibly Burnt
1648-155	1	Kitchen	Fragment	Ceramic	Unidentified Coarse Earthenware		Red Paste			4.1 g		Looks like part of a drainage pipe, maybe highly fired Brick.
1648-155	6	Biological	Shell	Shell								Fossilized Shell and coral
1648-155	1	Architecture	Fragment	Iron	Unidentified							Corroded
1648-156	7	Architecture	Brick	Coarse Earthenware			Red			4.9 g		
1648-156	1	Architecture	Fragment	Fossilized Shell/Concrete						7.7 g		Commonly used in utility trenches
1648-156	4	Architecture	Fragment	Iron	Unidentified							Corroded
1648-156	1	Tobacco Pipe	Pipe	Kaolin								Rim Fragment
1648-156	1	Architecture	Fragment	Glass	Flat		Clear					
1648-156	1	Architecture	Fragment	Glass	Flat		Clear					Flat Glass, but makes right angle with two flat sides
1648-156	1	Clothing	Ring	Metal (silver)								
1648-156	1	Kitchen	Fragment	Ceramic	Unidentified Refined Earthenware		White					

2005 Historic Bath Survey												
ACC-FS #	Artifact Count	Group	Class	Material	Type	Variety	Color	Element	Decoration	Weight in Grams	Dimensions	Remarks
1648-156	1	Kitchen	Fragment	Ceramic	Staffordshire Slipware		Yellow					
1648-157	3	Architecture	Brick	Coarse Earthenware			Orange			43.5 g		
1648-157	1	Architecture	Fragment	Metal (Iron?)	Unidentified							Corroded
1648-157	2	Tobacco Pipe	Pipe	Kaolin				Stem			5/64	
1648-157	1	Tobacco Pipe	Pipe	Kaolin				Stem			4/64	
1648-157	1	Kitchen	Fragment	Ceramic	Prehistoric Sand Tempered	Native American	Orange Paste		Fabric Impressed			
1648-158	2	Kitchen	Fragment	Glass	Curved		Clear					
1648-158	1	Architecture	Fragment	Glass	Flat		Clear					Foggy
1648-158	1	Kitchen	Fragment	Ceramic	Pearlware		White					
1648-158	1	Architecture	Nail	Iron	Unidentified							Corroded
1648-158	1	Architecture	Fragment	Iron	Unidentified							Corroded
1648-158	25+	Biological	Shell	Shell								
1648-158	1		Lithic	Lithic								
1648-158	2	Architecture	Brick	Coarse Earthenware			Red			1.1 g		
1648-158	2	Kitchen	Fragment	Ceramic	Prehistoric Sand Tempered	Native American	Orange Paste					
1648-159	6	Architecture	Fragment	Iron	Unidentified							Corroded
1648-159	2	Architecture	Fragment	Glass	Flat		Clear					Window
1648-159	6	Architecture	Brick	Coarse Earthenware			Red			2.9 g		
1648-159	1	Kitchen	Fragment	Ceramic	Prehistoric Sand Tempered	Native American	Gray Paste					
1648-160	20	Architecture	Brick	Coarse Earthenware			Red			15.1 g		
1648-160	1	Architecture	Fragment	Glass	Flat		Clear					Window
1648-160	1	Kitchen	Fragment	Glass	Curved		Aqua					
1648-160	1	Kitchen	Fragment	Ceramic	Unidentified Refined Earthenware		White					appears Burnt
1648-160	1	Architecture	Nail	Iron	Unidentified							Corroded
1648-160	5	Architecture	Fragment	Iron	Unidentified							Corroded
1648-160	1	Kitchen	Fragment	Metal	Aluminum Foil Fragment							
1648-160	1	Kitchen	Fragment	Ceramic	Prehistoric Sand Tempered	Native American	Orange Paste	Rim	Fabric Impressed			
1648-161	3	Architecture	Fragment	Coarse Earthenware			Orange			1.1 g		
1648-161	5	Biological	Shell	Shell								
1648-161	1	Architecture	Nail	Iron	Unidentified							Corroded
1648-161	15+	Architecture	Fragment	Iron	Unidentified							Corroded
1648-161	3	Kitchen	Fragment	Glass	Curved		Clear					
1648-161	7	Kitchen	Fragment	Ceramic	Pearlware		White					Burnt. All body Fragment, some re-fit, all appear to be from same vessel
1648-162	20+	Architecture	Fragment	Iron	Unidentified							Corroded
1648-162	11	Architecture	Nail	Iron	Unidentified							Corroded
1648-162	1	Architecture	Nail	Iron	Cut							Corroded
1648-162	1	Architecture	Nail	Iron	Wire							Corroded
1648-162	4	Architecture	Fragment	Coarse Earthenware			Red and Orange			63.8 g		
1648-162	15	Biological	Shell	Shell								
1648-162	2	Kitchen	Fragment	Ceramic	Pearlware		White					re-fit together
1648-162	4	Architecture	Fragment	Glass	Flat		Clear					Window
1648-162	1	Kitchen	Fragment	Glass	Curved		Aqua					Foggy
1648-162	1	Kitchen	Fragment	Glass	Curved		Clear					Foggy
1648-162	2	Kitchen	Fragment	Glass	Curved		Clear					
1648-162	2	Kitchen	Fragment	Glass	Curved		Amber					ribbed molding on One Piece
1648-162	2	Kitchen	Fragment	Glass	Curved		Aqua / 'Ball Blue'					Maybe from Ball Fruit Mason Jar
1648-162	1	Kitchen	Fragment	Glass	Curved		Cobalt Blue					
1648-163	20+	Biological	Shell	Shell								
1648-163	5	Architecture	Fragment	Glass	Flat		Clear					Window
1648-163	1	Kitchen	Fragment	Glass	Curved		Clear					Bottle
1648-163	2	Kitchen	Fragment	Glass	Curved		Aqua					
1648-163	1	Activities	Bead	Glass	Bead		Pink					4-sided oval bead

2005 Historic Bath Survey
