the moss is silent because

the moss is alive.
Once behavior and reward are paired, the dopamine neurons change their phasic firing pattern to respond to stimuli that predict rewards.
when we have tried everything... we become despondent.

We develop all types of learned associations that fail to address the core problem of wanting to feel better...
when we have tried everything... we become despondent.

LOST

We develop all types of learned associations that fail to address the core problem of wanting to feel better...
Ecologically, mosses break down exposed substrata, releasing nutrients for the use of more complex plants that succeed them.

A flower is a plant that lacks true roots.
